Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

from Staphylococcus aureus: use of this peptide sequence in the
synthesis of biologically active peptides."
RL Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
CC -1- FUNCTION: The ability of bacteria to bind fibronectin has been
proposed as a virulence factor enabling bacteria to colonize wound
tissues and blood clots. Binding of plasma fibronectin to the
bacterial surface might block adhesion receptors on S.aureus, thus
representing an important defense mechanism against tissue
invasion.
CC -1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
an amide bond (Potential).

Antibody that binds to fibronectin-binding protein, preventing its

binding to fibronectin - used to treat or prevent bacterial infection,

especially by Staphylococci and Streptococci.

Example 9; Page 110; 201pp; English.

The invention relates to antibodies that bind to a fibronectin-binding domain of a fibronectin-binding protein, and inhibit binding of the protein to a fibronectin. Also claimed are: (1) isolated peptides of a fibronectin-binding protein that do not bind to fibronectin; (2) fusion protein containing at least one peptide of a fibronectin-binding protein linked to a second amino acid sequence; (3) nucleic acid encoding the isolated peptide of (1). Antibodies, the isolated peptides of (1) and the nucleic acids are all useful for immunisation (active or passive) and (by inhibiting binding of bacteria to fibronectin) for preventing or treating infection in humans or other animals, particularly by staphylococci or

WPI; 1998-008801/01.

PT Antibody that interacts with collagen binding domain of Staphylococcal

PT with *Staphylococcus aureus*.

PS Disclosure; Page 91; 143pp; English.

CC This protein comprises Staphylococcus aureus fibronectin-binding
CC microbial surface component registering adhesive matrix molecule (MSCRAMM)

CC relates to claimed nucleic acid sequences (see AWP3456-38) encoding *S.*
CC aureus collagen binding protein (CBP) epitopes M17, M31 and M55 (see
CC AWP3152-54) that confer protection against *S. aureus* infection. CBP
CC protein and antigenic epitopes are contemplated for use in the treatment
CC of pathological infections, especially to prevent bacterial adhesion to
CC collagen. The epitopes are also contemplated for use in the preparation
CC of vaccines and as carrier proteins in vaccine formulations, as well as
CC in the formulation of compositions for the prevention of *S. aureus*
CC infection. pCBF3 and pOD (see AWP3155) were used to raise anti-M5CGRAM
CC polyclonal antibodies used in passive immunisation against bovine
CC mastitis. (Updated on 25-MAR-2003 to correct PI field.) (Updated on 27-
CC AUG-2003 to correct OS field.)

XX
XX Identifying, isolating and producing hyperimmune serum-reactive antigens
PT from a pathogen, for preparing vaccine or medicament for treating or
PT preventing e.g. staphylococcal infections, comprises providing antibody
PT preparation.
XX
XX Example 7; Page 157; 252pp; English.
XX
XX The invention relates to a novel method for identifying, isolating and
CC producing hyperimmune serum-reactive antigens from a pathogen, tumour,
CC allergen, a tissue or host prone to auto-immunity, where the antigens are
CC used in a vaccine, comprises providing antibody preparation from a plasma
CC pool of a type of animal, or individual sera with antibodies against the
CC specific pathogen, tumour, allergen, tissue or host prone to auto-
CC immunity. The hyperimmune serum-reactive antigens comprising any of the
CC 62 sequences of 53-2261 amino acids fully defined in the specification,
CC or their hyperimmune fragments are useful for the manufacture of a
CC pharmaceutical preparation, particularly a vaccine against staphylococcal
CC infections or colonisation against S. aureus or S. epidermidis. The
CC preparation of antibodies is useful for the manufacture of a medicament
CC for treating or preventing staphylococcal infections or colonisation
CC against S. aureus or S. epidermidis. The antibody preparations may also
CC be used for diagnostic and imaging purposes. Other conditions that can be
CC treated include cancer, autoimmune diseases or infections caused by viral
CC (e.g. HIV, hepatitis A, B or C), fungal or protozoan pathogens. This
CC sequence represents a staphylococcal protein relating to the method for
CC identifying and producing pathogen specific antigens of the invention

CC invention. The DNA sequences encoding the S. aureus proteins are recorded
CC on a computer readable medium, preferably selected from a floppy or hard
CC disk, random access memory (RAM), read-only memory (ROM) or CD-ROM.
CC Homology searches using the S. aureus DNA sequences allows putative
CC functions to be assigned so that protein-encoding or regulatory regions
CC of commercial, therapeutic or industrial importance can be obtained.
CC Specifically, sequences which are likely to encode antigens have been
CC identified and these polypeptides can be used in a vaccine composition
CC against S. aureus infection. The polypeptides can also be used in a kit
CC for the immunodetection of S. aureus in a sample. S. aureus is implicated
CC in numerous human diseases, including cellulitis, eyelid infections, food
CC poisoning, osteomyelitis, skin and surgical wound infections, scalded
CC skin syndrome, toxic shock syndrome, etc. Organisms transformed with the
CC DNA sequences can be used for recombinant production of the polypeptides.
CC The new DNA sequences (and their fragments) are useful as primers or
CC probes for isolating homologues of any of the 5191 S. aureus DNA sequences
XX contained on the computer readable medium

XX
XX Polypeptide(s) derived from Staphylococcus aureus fibronectin binding
PT protein - inhibit binding of bacteria to extracellular matrix proteins,
PT for combating infection at the site of wounds and surgical implants, and
PT in oral hygiene.
XX Claim 6; Page 24; 35pp; English.
XX
XX AAR90937-R90942 represent D3D4 polypeptides. These sequences correspond
CC to fragments of the Staphylococcus aureus fibronectin binding protein
CC (Fbp). This sequence corresponds to residues 18-130 of S. aureus J2385
CC (Fbp), and also contains the D2 region, and a portion of the D1 region.
CC These sequences, and monoclonal antibodies against them can be used to
CC combat infection at the site of wounds, surgical implants and other in-
CC dwelling devices (such as catheters), and as antiadherent agents in oral
CC hygiene. They can also be used in the manufacture of a medicament for the
CC prevention of adhesion of bacteria to extracellular matrix proteins
CC present on in-dwelling devices or in wounds, or of oral pathogens to
CC similar proteins on surfaces in the oral cavity

XX
XX Claim 5; Page 32; 41pp; English.

CC Adherence of oral pathogens, particularly to tooth surfaces, can be
CC prevented by application of a fibronectin binding protein or polypeptide.
CC The fibronectin binding protein or polypeptide is useful in the
CC manufacture of oral hygiene compositions, eg. toothpaste, liquid
CC dentifrice, mouthwash or lozenge. They are useful to prevent the plaque-
CC related development of carious lesions, gingivitis, calculus or
CC periodontal disease and to combat oral cavity infections, e.g.
CC candidiasis. They may also be useful in oral surgery e.g. in guided
CC tissue regeneration procedures to prevent subsequent bacterial infection,
CC and for irrigation of periodontal pockets. This sequence corresponds to
CC amino acids 709-838 of the D1-D4 fibronectin binding domain of
CC Staphylococcus aureus

PS
XX Example 2; Fig 8A-B; 130pp; English.
XX
XX The invention provides bovine herpes virus-2 (BHV-2) based vectors that
CC comprise at least one cytokine-encoding DNA sequence. The expression of
CC cytokines in mammals can up-regulate immune responses to the immunogens.
CC The cytokine is selected from interleukins (IL), colony stimulating
CC factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The
CC BHV-2 based vector or recombinant virus can be used as vaccines. They can
CC be used for preventing or treating a mucosal disease in a subject, e.g.
CC ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly
CC mastitis in cows or breast cancers in humans. They can also be used for
CC preventing or treating a stress-induced disease. The present sequence
CC represents the binding domain of a previously published S. aureus
CC fibronectin binding protein B (FnBB) sequence. The FnB binding domain
CC gene sequence FNBBAB, cloned for use in this invention has 97.8 percent
CC identity when compared to the previously published FNBA and FnBB gene
CC sequences

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

SUMMARIES

RT	"Nucleotide sequence of the gene for a fibronectin-binding protein			
RT	from Staphylococcus aureus: use of this peptide sequence in the			
RT	synthesis of biologically active peptides."			
RL	Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).			
CC	-1- FUNCTION: The ability of bacteria to bind fibronectin has been			
CC	proposed as a virulence factor enabling bacteria to colonize wound			
CC	tissues and blood clots. Binding of plasma fibronectin to the			
CC	bacterial surface might block adhesion receptors on S.aureus, thus			
CC	representing an important defense mechanism against tissue			
CC	invasion.			
CC	-1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by			
CC	an amide bond (Potential).

PT Antibody that binds to fibronectin-binding protein, preventing its
PT binding to fibronectin - used to treat or prevent bacterial infection,
PT especially by Staphylococci and Streptococci.
XX
XX Example 9, Page 110; 201p; English.
PS
XX The invention relates to antibodies that bind to a fibronectin-binding
XX domain of a fibronectin-binding protein, and inhibit binding of the
XX protein to fibronectin. Also claimed are: (1) isolated peptides of a
XX fibronectin-binding protein that do not bind to fibronectin; (2) fusion
XX protein containing at least one peptide of a fibronectin-binding protein
XX linked to a second amino acid sequence; (3) nucleic acid encoding the
XX isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
XX nucleic acids are all useful for immunisation (active or passive) and (by
XX inhibiting binding of bacteria to fibronectin) for preventing or treating
XX infection in humans or other animals, particularly by staphylococci or

```
CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
CC mastitis in cattle, abortion in horses and many others. Since the
CC antibodies block binding of bacteria, they should be effective against
CC antibiotic-resistant strains, and may replace antibiotic therapy or
CC increase its effectiveness. Sequences AAW65719-41 and AAW65658 represent
CC peptides which were synthesised to span the D1 motif and the N-terminal
CC 18 amino acids of D2, with each peptide overlapping by eight amino acids
CC with the previous sequence

N-PSDB; AAN81098.

Hybrid DNA encoding Staphylococcus aureus fibronectin binding protein -
 useful for immunisation and topical application to prevent staphylococcal
 infections.

Claim 11; Page 12; 23pp; English.

The peptide has fibronectin binding ability. It is useful for immunising
 ruminants against staphylococcal mastitis, pref. when used at 0.5-5
 micrograms/kg, using 3 doses given at 1-3 week intervals; for topical
 application to prevent wound infection, using an isotonic saline soln. of
 concn. 25-250 micrograms/ml; and, when immobilised on a carrier, for
 diagnosing staphylococcal infections. (Updated on 25-MAR-2003 to correct
 PF field.) (Updated on 25-MAR-2003 to correct PA field.)

Lindberg MK, Signas LC, Madstrom TM, Froman G;

WPI; 1988-347978/49.

N-PSDB; AAN82055.

Hybrid DNA encoding Staphylococcus aureus fibronectin binding protein -
 useful for immunisation and topical application to prevent staphylococcal
 infections.

Claim 11; Page 12; 23pp; English.

The S.aureus fibronectin binding protein may be included in a hybrid
 protein. The protein may be used to immunise ruminants against
 staphylococcal mastitis, pref. when given at 0.5-5 microg/kg, using 3
 doses at 1-3 week intervals; and for topical applicn. to prevent wound
 infection, pref. using isotonic saline soln. of concn. 25-250 microg/mg.
 The DNA encoding the binding protein and the hybrid protein may be
 immobilised on a carrier and used to diagnose staphylococcal infections.
 (Updated on 25-MAR-2003 to correct PA field.)

XX
XX Antibody that binds to fibronectin-binding protein, preventing its
PT binding to fibronectin - used to treat or prevent bacterial infection,
PT especially by Staphylococci and Streptococci.
XX
XX Example 2; Page 92; 201pp; English.
XX
XX The invention relates to antibodies that bind to a fibronectin-binding
CC domain of a fibronectin-binding protein, and inhibit binding of the
CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
CC protein containing at least one peptide of a fibronectin-binding protein
CC linked to a second amino acid sequence; (3) nucleic acid encoding the
CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
CC nucleic acids are all useful for immunisation (active or passive) and (by
CC inhibiting binding of bacteria to fibronectin) for preventing or treating
CC infection in humans or other animals, particularly by staphylococci or
CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
CC mastitis in cattle, abortion in horses and many others. Since the
CC antibodies block binding of bacteria, they should be effective against
CC antibiotic-resistant strains, and may replace antibiotic therapy or
CC increase its effectiveness. Sequences AAM6559-68 represent synthetic
CC epitopes from the fibronectin binding domains DV and DI-D4 of the S.

XX New bovine herpes virus-2 vectors.

XX Example 2; Fig 8A-B; 130pp; English.

XX The invention provides bovine herpes virus-2 (BHV-2) based vectors that

XX comprise at least one cytokine-encoding DNA sequence. The expression of

XX cytokines in mammals can up-regulate immune responses to the immunogens.

XX The cytokine is selected from interleukin (IL), colony stimulating

XX factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The

XX BHV-2 based vector or recombinant virus can be used as vaccines. They can

XX be used for preventing or treating a mucosal disease in a subject, e.g.

XX mastitis in cows or breast cancers in humans. They can also be used for

XX preventing or treating a stress-induced disease. The present sequence

XX represents the binding domain of a previously published S. aureus

XX fibronectin binding protein A (FnBA) sequence. The FnB binding domain

XX gene sequence FNBA, cloned for use in this invention has 97.8 percent

CC identity when compared to the previously published FNBA and FNBB gene
CC sequences

XX cna gene product - useful to prevent bacterial sepsis in animal infected

XX with Staphylococcus aureus.

PS Disclosure; Page 91; 143pp; English.

XX This protein comprises Staphylococcus aureus fibronectin-binding

CC microbial surface component recognising adhesive matrix molecule (MSCRAMM)

CC derivative pQD, plus a vector-derived N-terminal peptide. The invention

CC relates to claimed nucleic acid sequences (see AAT93436-38) encoding S.

CC aureus collagen binding protein (CBP) epitopes M17, M31 and M55 (see

CC AAW31552-54) that confer protection against S. aureus infection. CBP

CC protein and antigenic epitopes are contemplated for use in the treatment

CC of pathological infections, especially to prevent bacterial adhesion to

CC collagen. The epitopes are also contemplated for use in the preparation

CC of vaccines and as carrier proteins in vaccine formulations, as well as

CC in the formulation of compositions for the prevention of S. aureus

CC infection. pCR33 and pQD (see AAW31556) were used to raise anti-MSCRAMM

CC polyclonal antibodies used in passive immunisation against bovine

CC mastitis. (Updated on 25-MAR-2003 to correct PI field.) (Updated on 27-

XX Identifying, isolating and producing hyperimmune serum-reactive antigens
XX from a pathogen, for preparing vaccine or medicament for treating or
XX preventing e.g. staphylococcal infections, comprises providing antibody
XX preparation.
XX
XX Example 7; Page 157; 252pp; English.
XX
XX The invention relates to a novel method for identifying, isolating and
XX producing hyperimmune serum-reactive antigens from a pathogen, tumour,
XX allergen, a tissue or host prone to auto-immunity, where the antigens are
XX used in a vaccine, comprises providing antibody preparation from a plasma
XX pool of a type of animal, or individual sera with antibodies against the
XX specific pathogen, tumour, allergen, tissue or host prone to auto-
XX immunity. The hyperimmune serum-reactive antigens comprising any of the
XX 62 sequences of 53-2261 amino acids fully defined in the specification,
XX or their hyperimmune fragments are useful for the manufacture of a
XX pharmaceutical preparation, particularly a vaccine against staphylococcal
XX infections or colonisation against S. aureus or S. epidermidis. The
XX preparation of antibodies is useful for the manufacture of a medicament
XX for treating or preventing staphylococcal infections or colonisation
XX against S. aureus or S. epidermidis. The antibody preparations may also
XX be used for diagnostic and imaging purposes. Other conditions that can be
XX treated include cancer, autoimmune diseases or infections caused by viral
XX (e.g. HIV, hepatitis A, B or C), fungal or protozoan pathogens. This
XX sequence represents a staphylococcal protein relating to the method for
XX identifying and producing pathogen specific antigens of the invention

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

SUMMARIES

Result No.	Score	Query Match	Length	DB	ID	Description

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RT	"Nucleotide sequence of the gene for a fibronectin-binding protein				
RT	from Staphylococcus aureus: use of this peptide sequence in the				
RT	synthesis of biologically active peptides."				
RL	Proc. Natl. Acad. Sci. U.S.A. 86:1699-703(1989).				
CC	-1- FUNCTION: The ability of bacteria to bind fibronectin has been				
CC	proposed as a virulence factor enabling bacteria to colonize wound				
CC	tissues and blood clots. Binding of plasma fibronectin to the				
CC	bacterial surface might block adhesion receptors on S.aureus, thus				
CC	representing an important defense mechanism against tissue				
CC	invasion.				
CC	-1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by				
CC	an amide bond (Potential).

RT      "generation and initial analysis of more than 15,000 full-length human
RA      and mouse cDNA sequences.";
RA      Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002)'.
RL      -1- FUNCTION: Calcium-regulated non-lysosomal thiol-protease which
CC      catalyze limited proteolysis of substrates involved in
CC      cytoskeletal remodeling and signal transduction.
CC      -1- CATALYTIC ACTIVITY: Broad endopeptidase specificity.
CC      -1- SUBUNIT: Heterodimer of a large (catalytic) and a small
CC      (regulatory) subunit.
CC      -1- TISSUE SPECIFICITY: Highest expression in testis.
CC      -1- SIMILARITY: Belongs to the peptidase C2 family.
CC      -1- SIMILARITY: Contains 1 calpain catalytic domain.
CC      -1- SIMILARITY: Contains 2 EF-hand calcium-binding domains.
CC      -----

XX binding to fibronec - used to treat or prevent bacterial infection,
XX especially by Staphylococci and Streptococci.
XX
XX Example 9; Page 110; 201P; English.
XX
XX The invention relates to antibodies that bind to a fibronec-binding
XX domain of a fibronec-binding protein, and inhibit binding of the
XX protein to a second amino acid sequence; (3) nucleic acid encoding the
XX protein containing at least one peptide of a fibronec-binding protein
XX linked to a second amino acid sequence; (4) isolated peptides of (1) and the
XX isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
XX nucleic acids are all useful for immunisation (active or passive) and (by
XX inhibiting binding of bacteria to fibronec) for preventing or creating
XX infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAM65719-41 and AAM65658 represent
 CC peptides which were synthesised to span the D1 motif and the N-terminal
 CC 18 amino acids of D2, with each peptide overlapping by eight amino acids
 CC with the previous sequence

XX New bovine herpes virus-2 vectors.

PT Example 2; Fig 8A-B; 130pp; English.

XX The invention provides bovine herpes virus-2 (BHV-2) based vectors that
 CC comprise at least one cytokine-encoding DNA sequence. The expression of
 CC cytokines in mammals can up-regulate immune responses to the immunogens.
 CC The cytokine is selected from interleukins (IL), colony stimulating
 CC factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The
 CC BHV-2 based vector or recombinant virus can be used as vaccines. They can
 CC be used for preventing or treating a mucosal disease in a subject, e.g.

CC ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly
 CC mastitis in cows or breast cancers in humans. They can also be used for
 CC preventing or treating a stress-induced disease. The present sequence
 CC represents the binding domain of a previously published S. aureus
 CC fibronectin binding protein A (FnBA) sequence. The FnB binding domain
 CC gene sequence FNBA1, cloned for use in this invention has 97.8 percent
 CC identity when compared to the previously published FnBA and FnBB gene
 CC sequences

XX Antibody that interacts with collagen binding domain of Staphylococcal

XX gene product - useful to prevent bacterial sepsis in animal infected

XX with Staphylococcus aureus.

XX Disclousure; Page 91; 143pp; English.

XX This protein comprises Staphylococcus aureus fibronectin-binding
 CC microbial surface component recognising adhesive matrix molecule (MSCRAMM)
 CC derivative pOD, plus a vector-derived N-terminal peptide. The invention
 CC relates to claimed nucleic acid sequences (see AAT93436-38) encoding S.
 CC aureus collagen binding protein (CBP) epitopes M17, M31 and M55 (see
 CC AAW31552-54) that confer protection against S. aureus infection. CBP
 CC protein and antigenic epitopes are contemplated for use in the treatment
 CC of pathological infections, especially to prevent bacterial adhesion to
 CC collagen. The epitopes are also contemplated for use in the preparation
 CC of vaccines and as carrier proteins in vaccine formulations, as well as

CC in the formulation of compositions for the prevention of *S. aureus*
 CC infection. pCF33 and pQD (see AAW31556) were used to raise anti-MSCRAMM
 CC polyclonal antibodies used in passive immunisation against bovine
 CC mastitis. (Updated on 25-MAR-2003 to correct PI field.) (Updated on 27-
 CC AUG-2003 to correct OS field.)

 PT New polymucleotides for the identification and development of
 PT antibiotics, comprise sequences of antisense nucleic acids.
 XX
 PS Example 3; SEQ ID NO 12838; 51pp; English.

CC The invention relates to antisense inhibitors of genes essential to
 CC prokaryotic cellular proliferation, their use in identifying the genes,
 CC their use in the discovery of novel antibiotics, the essential genes
 CC themselves and the encoded proteins. The prokaryotes used are *Escherichia*
 CC coli, *Staphylococcus aureus*, *Salmonella typhi*, *Klebsiella pneumoniae*,
 CC *Pseudomonas aeruginosa* and *Enterococcus faecalis*. The invention is also
 CC useful for the identification of potential new targets for antibiotic
 CC development. The antisense nucleic acids can also be used to identify
 CC proteins used in proliferation, to express these proteins, and to obtain
 CC antibodies capable of binding to the expressed proteins. The proteins can
 CC be used to screen compounds in rational drug discovery programmes. The
 CC antisense nucleic acid sequence is also useful to screen for homologous
 CC nucleic acids which are required for cell proliferation in a wide variety
 CC of organisms. The present sequence represents an essential prokaryotic
 CC cellular proliferation protein. Note: The sequence data for this patent
 CC did not form part of the printed specification, but was obtained in
 CC electronic format directly from WIPO at
 CC ftp.wipo.int/pub/published_pct_sequences

Identifying, isolating and producing hyperimmune serum-reactive antigens

from a pathogen, for preparing vaccine or medicament for treating or

preventing e.g. staphylococcal infections, comprises providing antibody

preparation.

Example 7; Page 157; 252pp; English.

The invention relates to a novel method for identifying, isolating and

producing hyperimmune serum-reactive antigens from a pathogen, tumour,

allergen, a tissue or host prone to auto-immunity, where the antigens are

used in a vaccine, comprises providing antibody preparation from a plasma

pool of a type of animal, or individual sera with antibodies against the

specific pathogen, tumour, allergen, tissue or host prone to auto-

immunity. The hyperimmune serum-reactive antigens comprising any of the

62 sequences of 53-2261 amino acids fully defined in the specification,

or their hyperimmune fragments are useful for the manufacture of a

pharmaceutical preparation, particularly a vaccine against staphylococcal

infections or colonisation against *S. aureus* or *S. epidermidis*. The

preparation of antibodies is useful for the manufacture of a medicament

for treating or preventing staphylococcal infections or colonisation

against *S. aureus* or *S. epidermidis*. The antibody preparations may also

be used for diagnostic and imaging purposes. Other conditions that can be

treated include cancer, autoimmune diseases or infections caused by viral

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RT "Nucleotide sequence of the gene for a fibronectin-binding protein
RT from Staphylococcus aureus: use of this peptide sequence in the
RT synthesis of biologically active peptides."
RL Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
CC -I- FUNCTION: The ability of bacteria to bind fibronectin has been
CC proposed as a virulence factor enabling bacteria to colonize wound
CC tissues and blood clots. Binding of plasma fibronectin to the
CC bacterial surface might block adhesion receptors on S.aureus, thus
CC representing an important defense mechanism against tissue
CC invasion.
CC -I- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
CC an amide bond (Potential).

XX Example 9; Page 110; 201P; English.

XX The invention relates to antibodies that bind to a fibronecin-binding

XX domain of a fibronecin-binding protein, and inhibit binding of the

XX protein to fibronecin. Also claimed are: (1) isolated peptides of a

XX fibronecin-binding protein that do not bind to fibronecin; (2) fusion

XX protein containing at least one peptide of a fibronecin-binding protein

XX linked to a second amino acid sequence; (3) nucleic acid encoding the

XX isolated peptide of (1). Antibodies, the isolated peptides of (1) and the

XX nucleic acids are all useful for immunisation (active or passive) and (by

XX inhibiting binding of bacteria to fibronecin) for preventing or treating

XX infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
CC mastitis in cattle, abortion in horses and many others. Since the
CC antibodies block binding of bacteria, they should be effective against
CC antibiotic-resistant strains, and may replace antibiotic therapy or
CC increase its effectiveness. Sequences AAM65719-41 and AAM65658 represent
CC peptides which were synthesized to span the D1 motif and the N-terminal
CC 18 amino acids of D2, with each peptide overlapping by eight amino acids
CC with the previous sequence

 PT Monoclonal antibody for treating or preventing staphylococcal infections
 PT binds specified fibronection binding protein from Staphylococcus aureus.
 XX
 PS Claim 10; SEQ ID NO 2; 12pp; English.
 XX
 CC The invention relates to a new monoclonal antibody that binds fibronection
 CC binding proteins from Staphylococcus aureus, including fibronection
 CC binding protein A (FnbpA) and fibronection binding protein B (FnbpB). The
 CC antibody is useful in treating, preventing or diagnosing staphylococcal
 CC infections in a human or animal. The antibody is capable of recognising
 CC Staphylococcus aureus with high affinity. It also inhibits binding of
 CC staphylococcal bacteria to fibronection. This sequence represents a
 CC modified FnbpB D2 peptide of the invention.

XX Antibody that binds to fibronectin-binding protein, preventing its
 PT binding to fibronectin - used to treat or prevent bacterial infection,
 PT especially by Staphylococci and Streptococci.

PS Example 2; Page 92; 201pp; English.

XX The invention relates to antibodies that bind to a fibronectin-binding
 CC domain of a fibronectin-binding protein, and inhibit binding of the
 CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
 CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
 CC protein containing at least one peptide of a fibronectin-binding protein
 CC linked to a second amino acid sequence; (3) nucleic acid encoding the
 CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
 CC nucleic acids are all useful for immunisation (active or passive) and (by
 CC inhibiting binding of bacteria to fibronectin) for preventing or treating
 CC infection in humans or other animals, particularly by staphylococci or
 CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAM65659-68 represent synthetic
 CC epitopes from the fibronectin binding domains DU and DI-D4 of the S.
 CC aureus fnda gene

PT	New bovine herpes virus-2 vectors.	PS	Example 2; Fig 8A-B; 130pp; English.
CC	The invention provides bovine herpes virus-2 (BHV-2) based vectors that comprise at least one cytokine-encoding DNA sequence. The expression of cytokines in mammals can up-regulate immune responses to the immunogens. The cytokine is selected from interleukins (IL), colony stimulating factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The BHV-2 based vector or recombinant virus can be used as vaccines. They can be used for preventing or treating a mucosal disease in a subject, e.g., ruminants, cattle, sheep, goats, cats, horses, or man, particularly masticitis in cows or breast cancers in humans. They can also be used for preventing or treating a stress-induced disease. The present sequence represents the binding domain of a previously published S. aureus fibronectin binding protein B (Fnbb) sequence. The Fnb binding domain gene sequence FNBBab, cloned for use in this invention has 97.8 percent identity when compared to the previously published FNba and Fnbb gene sequences	SQ	Sequence 134 AA: Query Match 100.0%; Score 52; DB 2; Length 134; Best Local Similarity 100.0%; Pred. XX
PS Claim 23; Page 3259-3261; 3271pp; English.

CC This sequence represents a Staphylococcus aureus protein sequence of the
CC invention. The DNA sequences encoding the S. aureus proteins are recorded
CC on a computer readable medium, preferably selected from a floppy or hard
CC disk, random access memory (RAM), read-only memory (ROM) or CD-ROM.
CC Homology searches using the S. aureus DNA sequences allows putative
CC functions to be assigned so that protein-encoding or regulatory regions
CC of commercial, therapeutic or industrial importance can be obtained.
CC Specifically, sequences which are likely to encode antigens have been
CC identified and these polypeptides can be used in a vaccine composition
CC against S. aureus infection. The polypeptides can also be used in a kit
CC for the immunodetection of S. aureus in a sample. S. aureus is implicated
CC in numerous human diseases, including cellulitis, eyelid infections, food
CC poisoning, osteomyelitis, skin and surgical wound infections, scalded
CC skin syndrome, toxic shock syndrome, etc. Organisms transformed with the
CC DNA sequences can be used for recombinant production of the polypeptides.
CC The new DNA sequences (and their fragments) are useful as primers or
CC probes for isolating homologues of any of the 5191 S. aureus DNA sequences
CC contained on the computer readable medium

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RT from Staphylococcus aureus: use of this peptide sequence in the
RT synthesis of biologically active peptides.";
RL Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
CC -1- FUNCTION: The ability of bacteria to bind fibronectin has been
CC proposed as a virulence factor enabling bacteria to colonize wound
CC tissues and blood clots. Binding of plasma fibronectin to the
CC bacterial surface might block adhesion receptors on S.aureus, thus
CC representing an important defense mechanism against tissue
CC invasion.
CC -1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
CC an amide bond (potential).

XX PT Antibody that binds to fibronecctin-binding protein, preventing its binding to fibronecctin - used to treat or prevent bacterial infection, especially by Staphylococci and Streptococci.

PS Example 9; Page 110; 201pp; English.

The invention relates to antibodies that bind to a fibronecctin-binding domain of a fibronecctin-binding protein, and inhibit binding of the protein to fibronecctin. Also claimed are: (1) isolated peptides of a fibronecctin-binding protein that do not bind to fibronecctin; (2) fusion protein containing at least one peptide of a fibronecctin-binding protein linked to a second amino acid sequence; (3) nucleic acid encoding the isolated peptide of (1). Antibodies, the isolated peptides of (1) and the nucleic acids are all useful for immunisation (active or passive) and (by inhibiting binding of bacteria to fibronecctin) for preventing or treating infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65719-41 and AAW65658 represent
 CC peptides which were synthesised to span the D1 motif and the N-terminal
 CC 18 amino acids of D2, with each peptide overlapping by eight amino acids
 CC with the previous sequence

XX Increasing the level of TH1-type responses to molecules, used to treat
 PT infectious diseases, allergies and cancer, comprises conjugating the
 PT molecule to a plant virus.

PS Disclosure; Page 56; 89pp; English.

CC The present invention relates to a method for increasing the level of a
 CC TH1-type immune response to a molecule. The method comprising conjugating
 CC the molecule to a heterologous peptide expressed by a plant virus, and
 CC administering the conjugate to an animal. The method is useful for
 CC treating infectious diseases, allergies and cancer, by administering
 CC appropriate antigens conjugated to a plant virus. The present sequence is
 CC a peptide fragment of the fibronectin-binding protein, FnBP, of
 CC Staphylococcus aureus. This peptide was used to generate a chimeric virus
 CC particle of cowpea mosaic virus (CPMV) for use in the present invention

XX
XX Antibody that binds to fibronectin-binding protein, preventing its
XX binding to fibronectin - used to treat or prevent bacterial infection,
XX especially by Staphylococci and Streptococci.
XX
XX Example 8, Page 102; 201pp; English.
XX
XX The invention relates to antibodies that bind to a fibronectin-binding
XX domain of a fibronectin-binding protein, and inhibit binding of the
XX protein to fibronectin. Also claimed are: (1) isolated peptides of a
XX fibronectin-binding protein that do not bind to fibronectin; (2) fusion
XX protein containing at least one peptide of a fibronectin-binding protein
XX linked to a second amino acid sequence; (3) nucleic acid encoding the
XX isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
XX nucleic acids are all useful for immunisation (active or passive) and (by
XX inhibiting binding of bacteria to fibronectin) for preventing or treating
XX infection in humans or other animals, particularly by staphylococci or
XX streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
XX mastitis in cattle, abortion in horses and many others. Since the
XX antibodies block binding of bacteria, they should be effective against
XX antibiotic-resistant strains, and may replace antibiotic therapy or
XX increase its effectiveness. Sequences AAM65701-706 represent a series of
XX synthetic peptides based on the D2 region of S. aureus fibronectin
XX binding protein A. They were synthesised to contain mutations

XX PT Staphylococcus aureus fibronectin binding protein D2D3 polypeptide -
XX PT useful for combatting infection at wound sites, surgical implants, etc.
XX PT and as antiadherent agent in oral hygiene.
XX PS Claim 5; Page 26; 38pp; English.
XX CC The present sequence is the S. aureus fibronectin binding protein
XX CC polypeptide D2D3, which can be used to prevent adhesion of (e.g. gram
XX CC positive) bacteria, to extra-cellular matrix proteins on in-dwelling
XX CC devices, e.g. catheters or in wounds. D2D3 can also be used to prevent
XX CC oral pathogens from binding to extra-cellular matrix proteins, in the
XX CC oral cavity. D2D3 was found to be effective at inhibiting S. aureus 8325-
XX CC 4, and 120 adhesion to fibronectin coated PMMA coverslips, at a min.
XX CC adhesion inhibitor concn. of 10 microg/ml. D2D3 was derived from the D2
XX CC and D3 regions of the S. aureus J2385 (NCIMB 40532) fibronectin binding
XX CC protein

XX PT Polypeptide(s) derived from Staphylococcus aureus fibronectin binding
XX PT protein - inhibit binding of bacteria to extracellular matrix proteins,
XX PT for combatting infection at the site of wounds and surgical implants, and
XX PT in oral hygiene.
XX PS Claim 6; Page 24; 35pp; English.
XX CC AAR90937-R90942 represent D3D4 polypeptides. These sequences correspond
XX CC to fragments of the Staphylococcus aureus fibronectin binding protein
XX CC (Fbp). This sequence corresponds to residues 18-130 of S. aureus J2385
XX CC Fbp, and also contains the D2 region, and a portion of the D1 region.
XX CC These sequences, and monoclonal antibodies against them can be used to
XX CC combat infection at the site of wounds, surgical implants and other in-
XX CC dwelling devices (such as catheters), and as antiadherent agents in oral
XX CC hygiene. They can also be used in the manufacture of a medicament for the
XX CC prevention of adhesion of bacteria to extracellular matrix proteins
XX CC present on in-dwelling devices or in wounds, or of oral pathogens to
XX CC similar proteins on surfaces in the oral cavity

RT "Nucleotide sequence of the gene for a fibronectin-binding protein
RT from Staphylococcus aureus: use of this peptide sequence in the
RT synthesis of biologically active peptides.";
RL Proc. Natl. Acad. Sci. U.S.A. 86:699-703 (1989).
CC -1- FUNCTION: The ability of bacteria to bind fibronectin has been
CC proposed as a virulence factor enabling bacteria to colonize wound
CC tissues and blood clots. Binding of plasma fibronectin to the
CC bacterial surface might block adhesion receptors on S.aureus, thus
CC representing an important defense mechanism against tissue
CC invasion.
CC -1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
CC an amide bond (Potential).

Antibody that binds to fibronectin-binding protein, preventing its

binding to fibronectin - used to treat or prevent bacterial infection,

especially by Staphylococci and Streptococci.

Example 9; Page 11; 201pp; English.

The invention relates to antibodies that bind to a fibronectin-binding domain of a fibronectin-binding protein, and inhibit binding of the protein to fibronectin. Also claimed are: (1) isolated peptides of a fibronectin-binding protein that do not bind to fibronectin; (2) fusion protein containing at least one peptide of a fibronectin-binding protein linked to a second amino acid sequence; (3) nucleic acid encoding the isolated peptide of (1). Antibodies, the isolated peptides of (1) and the nucleic acids are all useful for immunisation (active or passive) and (b) inhibiting binding of bacteria to fibronectin for preventing or treating infection in humans or other animals, particularly by staphylococci or

```

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
CC mastitis in cattle, abortion in horses and many others. Since the
CC antibodies block binding of bacteria, they should be effective against
CC antibiotic-resistant strains, and may replace antibiotic therapy or
CC increase its effectiveness. Sequences AAM65744-58 represent peptides
CC which were synthesised to span the D3 motif of S. aureus fibronectin
CC binding protein A

PT Hybrid DNA encoding Staphylococcus aureus fibronectin binding protein -
PT useful for immunisation and topical application to prevent staphylococcal
PT infections.
XX
PS Claim 11; Page 12; 23pp; English.
XX
CC The S.aureus fibronectin binding protein may be included in a hybrid
CC protein. The protein may be used to immunise ruminants against
CC staphylococcal mastitis, pref. when given at 0.5-5 microg/kg, using 3
CC doses at 1-3 week intervals; and for topical applicn. to prevent wound
CC infection, pref. using isotonic saline soln. of concn. 25-250 microg/mg.
CC The DNA encoding the binding protein and the hybrid protein may be
CC immobilised on a carrier and used to diagnose staphylococcal infections.

PT Modifying and attaching therapeutic peptides to albumin prevents
PT peptidase degradation, useful for increasing length of in vivo activity.
XX
PS Disclosure; Page 566; 733pp; English.
XX
CC The present invention describes a modified therapeutic peptide (I)
CC comprising a therapeutically active amino acid region (III) and a
CC reactive group (II) (e.g. succinimidy1 and maleimido groups) attached to
CC a less therapeutically active amino acid region (IV), which covalently
CC bonds with amino/hydroxyl/thiol groups on blood components to form a
CC peptidase stabilised therapeutic peptide composed of 3-50 amino acids.
CC (I) are useful for modifying therapeutic peptides e.g. hormones, growth
CC factors and neurotransmitters, to protect them from peptidase activity in
CC vivo for the treatment of various disorders. Endogenous therapeutic
CC peptides are not suitable as drug candidates as they require frequent
CC administration due to rapid degradation by peptidases in the body.
CC Modifying and attaching therapeutic peptides to albumin prevents or
CC reduces the action of peptidases to increase length of activity (half
CC life) and specificity as bonding to large molecules decreases.
CC Intracellular uptake and interference with physiological processes.
CC AAB90829 to AAB92441 represent peptides which can be used in the
CC exemplification of the present invention

XX PT Hybrid DNA encoding Staphylococcus aureus fibronectin binding protein -
PT useful for immunisation and topical application to prevent staphylococcal
PT infections.
XX PS Claim 11; Page 12; 23pp; English.
XX XX The peptide has fibronectin binding ability. It is useful for immunising
CC ruminants against staphylococcal mastitis, pret. when used at 0.5-5
CC micrograms/kg, using 3 doses given at 1-3 week intervals; for topical
CC application to prevent wound infection, using an isotonic saline soln. of
CC concn. 25-250 micrograms/ml; and, when immobilised on a carrier, for
CC diagnosing staphylococcal infections. (Updated on 25-MAR-2003 to correct
CC PF field.) (Updated on 25-MAR-2003 to correct PA field.)

XX PT Staphylococcus aureus fibronectin binding protein D2D3 polypeptide -
PT useful for combatting infection at wound sites, surgical implants, etc.
PT and as adherent agent in oral hygiene.
XX PS Claim 5; Page 26; 38pp; English.
XX XX The present sequence is the S. aureus fibronectin binding protein
CC polypeptide D2D3, which can be used to prevent adhesion of (e.g. gram
CC positive) bacteria, to extra-cellular matrix proteins on in-dwelling
CC devices, e.g. catheters or in wounds. D2D3 can also be used to prevent
CC oral pathogens from binding to extra-cellular matrix proteins, in the
CC oral cavity. D2D3 was found to be effective at inhibiting S. aureus 8325-
CC 4, and 120 adhesion to fibronectin coated PMMA coverlips, at a min.
CC adhesion inhibitor concn. of 10 microg/ml. D2D3 was derived from the D2
CC and D3 regions of the S. aureus J2385 (NCIMB 40532) fibronectin binding
CC protein

CC The invention provides bovine herpes virus-2 (BHV-2) based vectors that
CC comprise at least one cytokine-encoding DNA sequence. The expression of
CC cytokines in mammals can up-regulate immune responses to the immunogens.
CC The cytokine is selected from interleukins (IL), colony stimulating
CC factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The
CC BHV-2 based vector or recombinant virus can be used as vaccine. They can
CC be used for preventing or treating a mucosal disease in a subject, e.g.,
CC ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly
CC mastitis in cows or breast cancers in humans. They can also be used for
CC preventing or treating a stress-induced disease. The present sequence
CC represents the binding domain of a previously published *S. aureus*
CC fibronectin binding protein B (FnBb) sequence. The FnB binding domain
CC gene sequence FNBBb, cloned for use in this invention has 97.8 percent
CC identity when compared to the previously published FNbA and FnBb gene
CC sequences

CC	The cytokine is selected from interleukins (IL), colony stimulating
CC	factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The
CC	BHV-2 based vector or recombinant virus can be used as vaccines. They can
CC	be used for preventing or treating a mucosal disease in a subject, e.g.
CC	ruminants, cattle, sheep, goats, cats, horses, or man, particularly
CC	mastitis in cows or breast cancers in humans. They can also be used for

CC preventing or treating a stress-induced disease. The present sequence
CC represents the binding domain of a previously published S. aureus
CC fibronectin binding protein A (FnBA) sequence. The FnB binding domain
CC gene sequence FNBA6, cloned for use in this invention has 97.8 percent
CC identity when compared to the previously published FnBA and FnB5 gene
CC sequences

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 A/Title: Identification of two types of smooth muscle myosin heavy chain isoforms by cD
 A/Reference number: A33501; MUID:8925535; PMID:2722872

A/Accession: A33501
 A/Molecule type: mRNA
 A/Residues: 1455-1972 <NAG>
 A/Cross-references: GB:J04833; NID:G165519; PIDN:AAA11407.1; PID:G165520
 A/Experimental source: smooth muscle
 A/Note: examination by Southern blotting for the regions of difference between this iso
 active splicing
 C/Superfamily: myosin heavy chain; myosin motor domain homology
 C/Keywords: actin binding; alternative splicing; ATP; coiled coil; hydrolyase; methylase
 F/88-771/Domain: myosin motor domain homology <MMOT>
 F/178-185/Region: nucleotide-binding motif A (P-loop)
 F/559-572/Region: actin binding #status predicted
 F/633-647/Region: actin binding #status predicted
 F/844-1938/Domain: coiled coil #status predicted <COI>
 F/844-1284/Region: S2
 F/1285-1972/Region: light meromyosin
 F/1339-1972/Domain: carboxyl-terminal <CBT>
 F/159/Modified site: N6,N6,N6-trimethyllysine (Lys) #status predicted
 F/184/Binding site: ATP (Lys) #status predicted
 F/701,711/Active site: Cys #status predicted

RA Signaes C., Raucel G., Joensson K., Lindgren P.-E.,
RA Anantharamiah G.M., Hoeeok M., Lindberg M.;
RT "Nucleotide sequence of the gene for a fibronectin-binding protein
RT from Staphylococcus aureus: use of this peptide sequence in the
RT synthesis of biologically active peptides.";
RL Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
CC -1- FUNCTION: The ability of bacteria to bind fibronectin has been
CC proposed as a virulence factor enabling bacteria to colonize wound
CC tissues and blood clots. Binding of plasma fibronectin to the
CC bacterial surface might block adhesion receptors on S.aureus, thus
CC representing an important defense mechanism against tissue
CC invasion.
CC -1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
CC an amide bond (potential).

XX CC Example 9; Page 111; 201pp; English.

XX CC The invention relates to antibodies that bind to a fibronectin-binding

XX CC domain of a fibronectin-binding protein, and inhibit binding of the

XX CC protein to fibronectin. Also claimed are: (1) isolated peptides of a

XX CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion

XX CC protein containing at least one peptide of a fibronectin-binding protein

XX CC linked to a second amino acid sequence; (3) nucleic acid encoding the

XX CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the

XX CC nucleic acids are all useful for immunisation (active or passive) and (by

XX CC inhibiting binding of bacteria to fibronectin) for preventing or treating

XX CC infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
CC mastitis in cattle, abortion in horses and many others. Since the
CC antibodies block binding of bacteria, they should be effective against
CC antibiotic-resistant strains, and may replace antibiotic therapy or
CC increase its effectiveness. Sequences AAB65744-58 represent peptides
CC which were synthesised to span the D3 motif of S. aureus fibronectin
CC binding protein A

PT Hybrid DNA encoding Staphylococcus aureus fibronectin binding protein -
PT useful for immunisation and topical application to prevent staphylococcal
PT infections.
XX
PS Claim 11; Page 12; 23pp; English.
XX
CC The S.aureus fibronectin binding protein may be included in a hybrid
CC protein. The protein may be used to immunise ruminants against
CC staphylococcal mastitis, pref. when given at 0.5-5 microg/kg, using 3
CC doses at 1-3 week intervals; and for topical applicn. to prevent wound
CC infection, pref. using isotonic saline soln. of concn. 25-250 microg/mg.
CC The DNA encoding the binding protein and the hybrid protein may be
CC immobilised on a carrier and used to diagnose staphylococcal infections.
CC (Updated on 25-MAR-2003 to correct PA field.)

PT Modifying and attaching therapeutic peptides to albumin prevents
PT peptidase degradation, useful for increasing length of in vivo activity.
XX
PS Disclosure; Page 566; 733pp; English.
XX
CC The present invention describes a modified therapeutic peptide (I)
CC comprising a therapeutically active amino acid region (III) and a
CC reactive group (II) (e.g. succinimidyl and maleimido groups) attached to
CC a less therapeutically active amino acid region (IV), which covalently
CC bonds with amino/hydroxyl/thiol groups on blood components to form a
CC peptidase stabilised therapeutic peptide composed of 3-50 amino acids.
CC (I) are useful for modifying therapeutic peptides e.g. hormones, growth
CC factors and neurotransmitters, to protect them from peptidase activity in
CC vivo for the treatment of various disorders. Endogenous therapeutic
CC peptides are not suitable as drug candidates as they require frequent
CC administration due to rapid degradation by peptidases in the body.
CC Modifying and attaching therapeutic peptides to albumin prevents or
CC reduces the action of peptidases to increase length of activity (half
CC life) and specificity as bonding to large molecules decreases
CC intracellular uptake and interference with physiological processes.
CC AAB90829 to AAB82441 represent peptides which can be used in the
CC exemplification of the present invention

CC AAR90937-R90942 represent D3D4 polypeptides. These sequences correspond
CC to fragments of the *Staphylococcus aureus* fibronectin binding protein
CC (Fbp). This sequence corresponds to residues 54-181 of *S. aureus* J2385
CC (Fbp), and also contains the D2 region, and a portion of the wall region 1
CC (WRI). These sequences, and monoclonal antibodies against them can be
CC used to combat infection at the site of wounds, surgical implants and
CC other in-dwelling devices (such as catheters), and as antiadherent agents
CC in oral hygiene. They can also be used in the manufacture of a medicament
CC for the prevention of adhesion of bacteria to extracellular matrix
CC proteins present on in-dwelling devices or in wounds, or of oral
CC pathogens to similar proteins on surfaces in the oral cavity

XX The invention provides bovine herpes virus-2 (BHV-2) based vectors that
CC comprise at least one cytokine-encoding DNA sequence. The expression of
CC cytokines in mammals can up-regulate immune responses to the immunogens.
CC The cytokine is selected from interleukins (IL), colony stimulating
CC factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The
CC BHV-2 based vector or recombinant virus can be used as vaccines. They can
CC be used for preventing or treating a mucosal disease in a subject, e.g.
CC ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly
CC mastitis in cows or breast cancers in humans. They can also be used for
CC preventing or treating a stress-induced disease. The present sequence
CC represents a S. aureus fibronectin binding protein binding domain
CC sequence FNMBB, the gene cloned for use in this invention. The gene has
CC 97.8 percent identity when compared to the previously published sequences
CC FNBA and FNBB

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A41604

myosin heavy chain, smooth muscle, long splice form - rabbit

C:Species: Oryctolagus cuniculus (domestic rabbit)

C>Date: 31-Dec-1993 #sequence_revision 31-Dec-1993 #text_change 19-Apr-2002

C:Accession: A41604; A33501

R:Barb, P.; Kelly, C.; Periaesamy, M.

Proc. Natl. Acad. Sci. U.S.A. 88, 10676-10680, 1991

A:Title: Characterization of a mammalian smooth muscle myosin heavy-chain gene: complete

A:Reference number: A41604; MUID:92073350; PMID:1961735

A:Accession: A41604

A:Molecule type: mRNA

A:Residues: 1-1972 <BAB>

A:Cross-references: GB:M77812

R:Nagai, R.; Kuro-o, M.; Barb, P.; Periaesamy, M.

J. Biol. Chem. 264, 9734-9737, 1989

A:Title: Identification of two types of smooth muscle myosin heavy chain isoforms by CDN

A:Reference number: A33501; MUID:89255535; PMID:2722872

A:Accession: A33501

A:Molecule type: mRNA

A:Residues: 1451-1972 <NAG>

A:Cross-references: GB:J04833; NID:g165519; PIDN:AAA11407.1; PID:g165520

A:Experimental source: smooth muscle

A>Note: examination by Southern blotting for the regions of difference between this iso-

form and the

active splicing

C:Superfamily: myosin heavy chain; myosin motor domain homology

C:Keywords: actin binding; alternative splicing; ATP; coiled coil; hydrolase; methylated

F:88-771/Domain: myosin motor domain homology <MMOT>

F:178-185/Region: nucleotide-binding motif A (P-loop)

F:559-572/Region: actin binding #status predicted

F:633-647/Region: actin binding #status predicted

F:844-1938/Domain: coiled coil #status predicted <COI>

F:844-1284/Region: S2

F:1285-1972/Region: light meromyosin

F:1939-1972/Domain: carboxyl-terminal <CBT>

F:129/Modified site: N6,N6,N6-trimethyllysine (Lys) #status predicted

F:184/Binding site: ATP (Lys) #status predicted

F:701,711/Active site: Cys #status predicted

CC from *Staphylococcus aureus*: use of this peptide sequence in the
CC synthesis of biologically active peptides.";
CC Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
CC
CC -1- FUNCTION: The ability of bacteria to bind fibronectin has been
CC proposed as a virulence factor enabling bacteria to colonize wound
CC tissues and blood clots. Binding of plasma fibronectin to the
CC bacterial surface might block adhesion receptors on *S.aureus*, thus
CC representing an important defense mechanism against tissue
CC invasion.
CC
CC -1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
CC an amide bond (potential).

Antibody that binds to fibronectin-binding protein, preventing its

binding to fibronectin - used to treat or prevent bacterial infection,

especially by Staphylococci and Streptococci.

Example 9; Page 11; 201pp; English.

The invention relates to antibodies that bind to a fibronectin-binding domain of a fibronectin-binding protein, and inhibit binding of the protein to a fibronectin. Also claimed are: (1) isolated peptides of a fibronectin-binding protein that do not bind to fibronectin; (2) fusion protein containing at least one peptide of a fibronectin-binding protein linked to a second amino acid sequence; (3) nucleic acid encoding the isolated peptide of (1). Antibodies, the isolated peptides of (1) and the nucleic acids are all useful for immunisation (active or passive) and (b) inhibiting binding of bacteria to fibronectin (for preventing or treating infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW5744-58 represent peptides
 CC which were synthesised to span the D3 motif of S. aureus fibronectin
 CC binding protein A

PT Hybrid DNA encoding Staphylococcus aureus fibronectin binding protein -
 PT useful for immunisation and topical application to prevent staphylococcal
 PT infections.

XX Claim 11; Page 12; 23pp; English.

XX The S. aureus fibronectin binding protein may be included in a hybrid
 CC protein. The protein may be used to immunise ruminants against
 CC staphylococcal mastitis, pref. when given at 0.5-5 microg/kg, using 3
 CC doses at 1-3 week intervals; and for topical applicn. to prevent wound
 CC infection, pref. using isotonic saline soln. of concn. 25-250 microg/mg.
 CC The DNA encoding the binding protein and the hybrid protein may be
 CC immobilised on a carrier and used to diagnose staphylococcal infections.

XX Modifying and attaching therapeutic peptides to albumin prevents
 PT peptidase degradation, useful for increasing length of in vivo activity.

XX Disclosure; Page 566; 733pp; English.

XX The present invention describes a modified therapeutic peptide (I)
 CC comprising a therapeutically active amino acid region (III) and a
 CC reactive group (II) (e.g. succinimide and maleimido groups) attached to
 CC a less therapeutically active amino acid region (IV), which covalently
 CC bonds with amino/hydroxyl/thiol groups on blood components to form a
 CC peptidase stabilized therapeutic peptide composed of 3-50 amino acids.
 CC (I) are useful for modifying therapeutic peptides e.g. hormones, growth
 CC factors and neurotransmitters, to protect them from peptidase activity in
 CC vivo for the treatment of various disorders. Endogenous therapeutic
 CC peptides are not suitable as drug candidates as they require frequent
 CC administration due to rapid degradation by peptidases in the body.
 CC Modifying and attaching therapeutic peptides to albumin prevents or
 CC reduces the action of peptidases to increase length of activity (half
 CC life) and specificity as bonding to large molecules decreases.
 CC Intracellular uptake and interference with physiological processes.
 CC AAB90829 to AAB92441 represent peptides which can be used in the
 CC exemplification of the present invention

PT in oral hygiene.
XX
PS Claim 6; Page 24; 35pp; English.
XX
CC AAR90937-R90942 represent D3D4 polypeptides. These sequences correspond
CC to fragments of the Staphylococcus aureus fibronectin binding protein
CC (Fbp). This sequence corresponds to residues 81-181 of S.aureus J2385
CC Fbp, and also contains a portion of the wall region 1 (WR1). These
CC sequences, and monoclonal antibodies against them can be used to combat
CC infection at the site of wounds, surgical implants and other in-dwelling
CC devices (such as catheters), and as antiadherent agents in oral hygiene.
CC They can also be used in the manufacture of a medicament for the
CC prevention of adhesion of bacteria to extracellular matrix proteins
CC present on in-dwelling devices or in wounds, or of oral pathogens to
CC similar proteins on surfaces in the oral cavity

XX Prevention of adherence of oral pathogens in the oral cavity, partic-
 PT tooth surfaces - by application of a fibronectin binding protein or
 PT polypeptide or a monoclonal antibody or fragment against it.

XX Claim 5; Page 32; 41pp; English.

XX Adherence of oral pathogens, particularly to tooth surfaces, can be
 CC prevented by application of a fibronectin binding protein or polypeptide.

CC The fibronectin binding protein or polypeptide is useful in the
 CC manufacture of oral hygiene compositions, eg. toothpaste, liquid

CC dentifrice, mouthwash or lozenge. They are useful to prevent the plaque-
 CC related development of carious lesions, gingivitis, calculus or

CC periodontal disease and to combat oral cavity infections, e.g.
 CC candidiasis. They may also be useful in oral surgery e.g. in guided

CC tissue regeneration procedures to prevent subsequent bacterial infection,
 CC and for irrigation of periodontal pockets. This sequence corresponds to

CC amino acids 709-838 of the D1-D4 fibronectin binding domain of
 CC Staphylococcus aureus

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

XX Mcgavin M;

XX WPI; 1998-413816/35.

XX Example 9; Page 111; 201pp; English.

XX The invention relates to antibodies that bind to a fibronection-binding

XX domain of a fibronection-binding protein, and inhibit binding of the

XX protein to fibronection. Also claimed are: (1) isolated peptides of a

XX fibronection-binding protein that do not bind to fibronection; (2) fusion

XX protein containing at least one peptide of a fibronection-binding protein

XX linked to a second amino acid sequence; (3) nucleic acid encoding the

XX isolated peptide of (1). Antibodies, the isolated peptides of (1) and the

XX nucleic acids are all useful for immunisation (active or passive) and (by

XX inhibiting binding of bacteria to fibronection) for preventing or treating

XX infection in humans or other animals, particularly by staphylococci or

XX Hybrid DNA encoding Staphylococcus aureus fibronectin binding protein -
XX useful for immunisation and topical application to prevent staphylococcal
XX infections.
XX Claim 11; Page 12; 23pp; English.
XX The peptide has fibronectin binding ability. It is useful for immunising
XX ruminants against staphylococcal mastitis, pref. when used at 0.5-5
XX micrograms/kg, using 3 doses given at 1-3 week intervals; for topical
XX application to prevent wound infection, using an isotonic saline soln. of
XX concn. 25-250 micrograms/ml; and, when immobilised on a carrier, for
XX diagnosing staphylococcal infections. (Updated on 25-MAR-2003 to correct
XX PF field.)

XX N-PSDB; AAT12582.
XX Staphylococcus aureus fibronectin binding protein D2D3 polypeptide -
XX useful for combating infection at wound sites, surgical implants, etc.
XX and as antiadherent agent in oral hygiene.
XX Claim 5; Page 26; 38pp; English.
XX The present sequence is the S. aureus fibronectin binding protein
XX polypeptide D2D3, which can be used to prevent adhesion of (e.g. gram
XX positive) bacteria, to extra-cellular matrix proteins on in-dwelling
XX devices, e.g. catheters or in wounds. D2D3 can also be used to prevent
XX oral pathogens from binding to extra-cellular matrix proteins, in the
XX oral cavity. D2D3 was found to be effective at inhibiting S. aureus 8325-
XX 4, and 120 adhesion to fibronectin coated PMA coverslips, at a min.
XX adhesion inhibitor concn. of 10 microg/ml. D2D3 was derived from the D2
XX and D3 regions of the S. aureus J2385 (NCIMB 40532) fibronectin binding
XX protein

 CC AAR90937-R90942 represent D3D4 polypeptides. These sequences correspond
 CC to fragments of the Staphylococcus aureus fibrinectin binding protein
 CC (Fbp). This sequence corresponds to residues 81-181 of S.aureus J2385
 CC (Fbp), and also contains a portion of the wall region 1 (WR1). These
 CC sequences, and monoclonal antibodies against them can be used to combat
 CC infection at the site of wounds, surgical implants and other in-dwelling
 CC devices (such as catheters), and as antiadherent agents in oral hygiene.
 CC They can also be used in the manufacture of a medicament for the
 CC prevention of adhesion of bacteria to extracellular matrix proteins
 CC present on in-dwelling devices or in wounds, or of oral pathogens to
 CC similar proteins on surfaces in the oral cavity

 XX

CC The invention provides bovine herpes virus-2 (BHV-2) based vectors that
 CC comprise at least one cytokine-encoding DNA sequence. The expression of
 CC cytokines in mammals can up-regulate immune responses to the immunogens.
 CC The cytokine is selected from interleukins (IL), colony stimulating
 CC factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The
 CC BHV-2 based vector or recombinant virus can be used as vaccines. They can
 CC be used for preventing or treating a mucosal disease in a subject, e.g.
 CC ruminants, cattle, sheep, dogs, cats, horses, or man, particularly
 CC mastitis in cows or breast cancers in humans. They can also be used for
 CC preventing or treating a stress-induced disease. The present sequence
 CC represents a S. aureus fibronectin binding protein binding domain
 CC sequence FnBAB, the gene cloned for use in this invention. The gene has
 CC 97.8 percent identity when compared to the previously published sequences
 CC FnBA and FnBB

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 RT "Nucleotide sequence of the gene for a fibronectin-binding protein
 from *Staphylococcus aureus*: use of this peptide sequence in the
 RT synthesis of biologically active peptides.";
 RL Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
 CC -1- FUNCTION: The ability of bacteria to bind fibronectin has been
 CC proposed as a virulence factor enabling bacteria to colonize wound
 CC tissues and blood clots. Binding of plasma fibronectin to the
 CC bacterial surface might block adhesion receptors on *S.aureus*, thus
 CC representing an important defense mechanism against tissue
 CC invasion.
 CC -1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
 CC an amide bond (potential).

 CC -1- FUNCTION: Major phosphatase responsible for tyrosine
 CC dephosphorylation of MAP kinase FUS3 to inactivate its activity;
 CC it also has important roles, along with MSG5, in the inactivation
 CC of FUS3 following pheromone stimulation.
 CC -1- CATALYTIC ACTIVITY: Protein tyrosine phosphate + H(2)O = protein

CC tyrosine + phosphate.
 CC -1- SIMILARITY: Belongs to the protein-tyrosine phosphatase family.
 CC Non-receptor class subfamily.
 CC -1- SIMILARITY: Contains 1 rhodanese domain.

PT Hybrid DNA encoding Staphylococcus aureus fibronectin binding protein -
PT useful for immunisation and topical application to prevent staphylococcal
PT infections.
XX
PS Claim 11; Page 12; 23pp; English.
XX
CC The S. aureus fibronectin binding protein may be included in a hybrid
CC protein. The protein may be used to immunise ruminants against
CC staphylococcal mastitis, pref. when given at 0.5-5 microg/kg, using 3
CC doses at 1-3 week intervals; and for topical applicn. to prevent wound
CC infection, pref. using isotonic saline soln. of concn. 25-250 microg/mg.
CC The DNA encoding the binding protein and the hybrid protein may be
CC immobilised on a carrier and used to diagnose staphylococcal infections.

PT Modifying and attaching therapeutic peptides to albumin prevents
PT peptidase degradation, useful for increasing length of in vivo activity.
XX
PS Disclosure; Page 566; 733pp; English.
XX
CC The present invention describes a modified therapeutic peptide (I)
CC comprising a therapeutically active amino acid region (III) and a
CC reactive group (II) (e.g. succinimidyl and maleimido groups) attached to
CC a less therapeutically active amino acid region (IV), which covalently
CC bonds with amino/hydroxyl/thiol groups on blood components to form a
CC peptidase stabilised therapeutic peptide composed of 3-50 amino acids.
CC (I) are useful for modifying therapeutic peptides e.g. hormones, growth
CC factors and neurotransmitters, to protect them from peptidase activity in
CC vivo for the treatment of various disorders. Endogenous therapeutic
CC peptides are not suitable as drug candidates as they require frequent
CC administration due to rapid degradation by peptidases in the body.
CC Modifying and attaching therapeutic peptides to albumin prevents or
CC reduces the action of peptidases to increase length of activity (half
CC life) and specificity as bonding to large molecules decreases
CC intracellular uptake and interference with physiological processes.
CC AAB90829 to AAB92441 represent peptides which can be used in the
CC exemplification of the present invention

FT
XX
XX Example 2; Fig 8A-B; 130pp; English.
PS
XX The invention provides bovine herpes virus-2 (BHV-2) based vectors that
CC comprise at least one cytokine-encoding DNA sequence. The expression of
CC cytokines in mammals can up-regulate immune responses to the immunogens.
CC The cytokine is selected from interleukins (IL), colony stimulating
CC factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The
CC BHV-2 based vector or recombinant virus can be used as vaccines. They can
CC be used for preventing or treating a mucosal disease in a subject, e.g.
CC ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly
CC mastitis in cows or breast cancers in humans. They can also be used for
CC preventing or treating a stress-induced disease. The present sequence
CC represents the binding domain of a previously published S. aureus
CC fibronectin binding protein A (FnBA) sequence. The Fnb binding domain
CC gene sequence FNBA9, cloned for use in this invention has 97.8 percent
CC identity when compared to the previously published FnBA and FnBB gene
CC sequences

PS Disclosure; Page 91; 143pp; English.
XX
XX This protein comprises Staphylococcus aureus fibronectin-binding
CC microbial surface component recognizing adhesive matrix molecule (MSCRAMM)
CC derivative pOD, plus a vector-derived N-terminal peptide. The invention
CC relates to claimed nucleic acid sequences (see AAU93436-38) encoding S.
CC aureus collagen binding protein (CBP) epitopes M17, M31 and M55 (see
CC AAU31552-54) that confer protection against S. aureus infection. CBP
CC protein and antigenic epitopes are contemplated for use in the treatment
CC of pathological infections, especially to prevent bacterial adhesion to
CC collagen. The epitopes are also contemplated for use in the preparation to
CC of vaccines and as carrier proteins in vaccine formulations, as well as
CC in the formulation of compositions for the prevention of S. aureus
CC infection. pCF33 and pOD (see AAU31556) were used to raise anti-MSCRAMM
CC polyclonal antibodies used in passive immunisation against bovine
CC mastitis. (Updated on 25-MAR-2003 to correct PI field.) (Updated on 27-

PT stored on computer readable medium and used in the production of anti-
PT *S. aureus* vaccines.

XX
PS Claim 23; Page 3263-3267; 3271pp; English.

XX
CC This sequence represents a Staphylococcus aureus protein sequence of the
CC invention. The DNA sequences encoding the *S. aureus* proteins are recorded
CC on a computer readable medium, preferably selected from a floppy or hard
CC disk, random access memory (RAM), read-only memory (ROM) or CD-ROM.
CC Homology searches using the *S. aureus* DNA sequences allows putative
CC functions to be assigned so that protein-encoding or regulatory regions
CC of commercial, therapeutic or industrial importance can be obtained.
CC Specifically, sequences which are likely to encode antigens have been
CC identified and these polypeptides can be used in a vaccine composition
CC against *S. aureus* infection. The polypeptides can also be used in a kit
CC for the immunodetection of *S. aureus* in a sample. *S. aureus* is implicated
CC in numerous human diseases, including cellulitis, eyelid infections, food
CC poisoning, osteomyelitis, skin and surgical wound infections, scalded
CC skin syndrome, toxic shock syndrome, etc. Organisms transformed with the
CC DNA sequences can be used for recombinant production of the polypeptides.
CC The new DNA sequences (and their fragments) are useful as primers or
CC probes for isolating homologues of any of the 5191 *S. aureus* DNA sequences
CC contained on the computer readable medium

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

RA Anantharamiah G.M., Hoecek M., Lindberg M.;
 RT "Nucleotide sequence of the gene for a fibronectin-binding protein
 from *Staphylococcus aureus*: use of this peptide sequence in the
 synthesis of biologically active peptides.";
 RL Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
 CC -1- FUNCTION: The ability of bacteria to bind fibronectin has been
 proposed as a virulence factor enabling bacteria to colonize wound
 tissues and blood clots. Binding of plasma fibronectin to the
 bacterial surface might block adhesion receptors on *S. aureus*, thus
 representing an important defense mechanism against tissue
 invasion.
 CC -1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
 an amide bond (potential).

XX Antibody that binds to fibronectin-binding protein, preventing its

XX binding to fibronectin - used to treat or prevent bacterial infection,

XX especially by Staphylococci and Streptococci.

XX Example 9; Page 111, 201pp; English.

XX The invention relates to antibodies that bind to a fibronectin-binding

XX domain of a fibronectin-binding protein, and inhibit binding of the

XX protein to fibronectin. Also claimed are: (1) isolated peptides of a

XX fibronectin-binding protein that do not bind to fibronectin; (2) fusion

XX protein containing at least one peptide of a fibronectin-binding protein

XX linked to a second amino acid sequence; (3) nucleic acid encoding the

XX isolated peptide of (1). Antibodies, the isolated peptides of (1) and the

XX nucleic acids are all useful for immunisation (active or passive) and (by

XX inhibiting binding of bacteria to fibronectin) for preventing or treating

XX infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAM65744-58 represent peptides
 CC which were synthesised to span the D3 motif of S. aureus fibronectin
 CC binding protein A

 XX
 PT Modifying and attaching therapeutic peptides to albumin prevents
 PT peptidase degradation, useful for increasing length of in vivo activity.
 XX
 PS Disclosure; Page 566; 733pp; English.
 XX
 The present invention describes a modified therapeutic peptide (I)
 CC comprising a therapeutically active amino acid region (III) and a
 CC reactive group (II) (e.g. succinimidyl and maleimido groups) attached to
 CC a less therapeutically active amino acid region (IV), which covalently
 CC bonds with amino/hydroxyl/thiol groups on blood components to form a
 CC peptidase stabilised therapeutic peptide composed of 3-50 amino acids.
 CC (I) are useful for modifying therapeutic peptides e.g. hormones, growth
 CC factors and neurotransmitters, to protect them from peptidase activity in
 CC vivo for the treatment of various disorders. Endogenous therapeutic
 CC peptides are not suitable as drug candidates as they require frequent
 CC administration due to rapid degradation by peptidases in the body.
 CC Modifying and attaching therapeutic peptides to albumin prevents or
 CC reduces the action of peptidases to increase length of activity (half
 CC life) and specifically as bonding to large molecules decreases
 CC intracellular uptake and interference with physiological processes.
 CC AAB90829 to AAB92441 represent peptides which can be used in the

CC exemplification of the present invention

 XX
 PS Example 2; Fig 8A-B; 130bp; English.
 XX
 CC The invention provides bovine herpes virus-2 (BHV-2) based expressions that
 CC comprise at least one cytokine-encoding DNA sequence. The expression of
 CC cytokines in mammals can up-regulate immune responses to the immunogens.
 CC The cytokine is selected from interleukins (IL), colony stimulating
 CC factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The
 CC BHV-2 based vector or recombinant virus can be used as vaccines. They can
 CC be used for preventing or treating a mucosal disease in a subject, e.g.
 CC ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly
 CC mastitis in cows or breast cancers in humans. They can also be used for
 CC preventing or treating a stress-induced disease. The present sequence
 CC represents the binding domain of a previously published S. aureus
 CC fibronectin binding protein A (FnBA) sequence. The FnB binding domain
 CC gene sequence FnBA, cloned for use in this invention has 97.8 percent
 CC identity when compared to the previously published FnBA and FnBB gene
 CC sequences

 XX
 PS Disclosure; Page 91; 143bp; English.
 XX
 CC This protein comprises Staphylococcus aureus fibronectin-binding
 CC microbial surface component recognising adhesive matrix molecule (MSCRAMM)
 CC derivative pQD, plus a vector-derived N-terminal peptide. The invention
 CC relates to claimed nucleic acid sequences (see AAT93436-38) encoding S.
 CC aureus collagen binding protein (CBP) epitopes M17, M31 and M55 (see
 CC AAT93436-54) that confer protection against S. aureus infection. CBP
 CC protein and antigenic epitopes are contemplated for use in the treatment
 CC of pathological infections, especially to prevent bacterial adhesion to
 CC collagen. The epitopes are also contemplated for use in the preparation
 CC of vaccines and as carrier proteins in vaccine formulations, as well as
 CC in the formulation of compositions for the prevention of S. aureus
 CC infection. pQF33 and pQD (see AAT93436) were used to raise anti-MSCRAMM
 CC polyclonal antibodies used in passive immunisation against bovine
 CC mastitis. (Updated on 25-MAR-2003 to correct PI field.) (Updated on 27-
 CC AUG-2003 to correct OS field.)

XX PS Example 7; Page 157; 252pp; English.
XX CC The invention relates to a novel method for identifying, isolating and
XX CC producing hyperimmune serum-reactive antigens from a pathogen, tumour,
XX CC allergen, a tissue or host prone to auto-immunity, where the antigens are
XX CC used in a vaccine, comprises providing antibody preparation from a plasma
XX CC pool of a type of animal, or individual sera with antibodies against the
XX CC specific pathogen, tumour, allergen, tissue or host prone to auto-
XX CC immunity. The hyperimmune serum-reactive antigens comprising any of the
XX CC 62 sequences of 53-2261 amino acids fully defined in the specification,
XX CC or their hyperimmune fragments are useful for the manufacture of a
XX CC pharmaceutical preparation, particularly a vaccine against staphylococcal
XX CC infections or colonisation against S. aureus or S. epidermidis. The
XX CC preparation of antibodies is useful for the manufacture of a medicament
XX CC for treating or preventing staphylococcal infections or colonisation
XX CC against S. aureus or S. epidermidis. The antibody preparations may also
XX CC be used for diagnostic and imaging purposes. Other conditions that can be
XX CC treated include cancer, autoimmune diseases or infections caused by viral
XX CC (e.g. HIV, hepatitis A, B or C), fungal or protozoan pathogens. This
XX CC sequence represents a staphylococcal protein relating to the method for
XX CC identifying and producing pathogen specific antigens of the invention

XX XX

CC The invention relates to novel genes and encoded proteins from
CC Staphylococcus aureus. A composition comprising the S. aureus protein, a
CC nucleic acid encoding the protein, or an antibody to the protein, is
CC useful as a pharmaceutical, particularly as a vaccine for treating or
CC preventing infection due to Staphylococcus bacteria, specifically an
CC infection caused by S. aureus. The composition is particularly useful for
CC treating or preventing sepsis in a patient. The composition can also be
CC used for diagnostics. The protein is also used in an assay for enzymatic
CC studies and as a target for antibiotics. This sequence represents one of
CC the novel S. aureus proteins of the invention

XX
XX Polynucleotide(s) and proteins derived from Staphylococcus aureus -
PT scored on computer readable medium and used in the production of anti-
PT S. aureus vaccines.
XX
PS Claim 23; Page 3263-3267; 3271pp; English.
XX
XX This sequence represents a Staphylococcus aureus protein sequence of the
CC invention. The DNA sequences encoding the S.aureus proteins are recorded
CC on a computer readable medium, preferably selected from a floppy or hard
CC disk, random access memory (RAM), read-only memory (ROM) or CD-ROM.
CC Homology searches using the S. aureus DNA sequences allows putative
CC functions to be assigned so that protein-encoding or regulatory regions
CC of commercial, therapeutic or industrial importance can be obtained.
CC Specifically, sequences which are likely to encode antigens have been
CC identified and these polypeptides can be used in a vaccine composition
CC against S.aureus infection. The polypeptides can also be used in a kit
CC for the immunodetection of S.aureus in a sample. S.aureus is implicated
CC in numerous human diseases, including cellulitis, eyelid infections, food
CC poisoning, osteomyelitis, skin and surgical wound infections, scalded
CC skin syndrome, toxic shock syndrome, etc. Organisms transformed with the

CC DNA sequences can be used for recombinant production of the polypeptides.
CC The new DNA sequences (and their fragments) are useful as primers or
CC probes for isolating homologues of any of the 5191 S.aureus DNA sequences
CC contained on the computer readable medium

PT Staphylococcus aureus fibronectin binding protein D2D3 polypeptide -
PT useful for combating infection at wound sites, surgical implants, etc.
XX
XX Claim 5; Page 26; 38pp; English.
XX
XX The present sequence is the S. aureus fibronectin binding protein
CC polypeptide D2D3, which can be used to prevent adhesion of (e.g. gram
CC positive) bacteria, to extra-cellular matrix proteins on in-dwelling
CC devices, e.g. catheters or in wounds. D2D3 can also be used to prevent
CC oral pathogens from binding to extra-cellular matrix proteins, in the
CC oral cavity. D2D3 was found to be effective at inhibiting S. aureus 8325-
CC 4, and 120 adhesion to fibronectin coated PMMA coverslips, at a min.
CC adhesion inhibitor concn. of 10 microg/ml. D2D3 was derived from the D2
CC and D3 regions of the S. aureus J2385 (NCIMB 40532) fibronectin binding
CC protein

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RA Anantharamaiah G.M., Hoecek M., Lindberg M.;
 RT "Nucleotide sequence of the gene for a fibronectin-binding protein
 from *Staphylococcus aureus*: use of this peptide sequence in the
 RT synthesis of biologically active peptides.";
 RL Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
 CC -1- FUNCTION: The ability of bacteria to bind fibronectin has been
 CC proposed as a virulence factor enabling bacteria to colonize wound
 CC tissues and blood clots. Binding of plasma fibronectin to the
 CC bacterial surface might block adhesion receptors on *S. aureus*, thus
 CC representing an important defense mechanism against tissue
 CC invasion.
 CC -1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
 CC an amide bond (potential).

PT Antibody that binds to fibronectin-binding protein, preventing its
binding to fibronectin - used to treat or prevent bacterial infection,
especially by Staphylococci and Streptococci.

PS Example 9; Page 111; 201pp; English.

The invention relates to antibodies that bind to a fibronectin-binding domain of a fibronectin-binding protein, and inhibit binding of the protein to fibronectin. Also claimed are: (1) isolated peptides of a fibronectin-binding protein that do not bind to fibronectin; (2) fusion protein containing at least one peptide of a fibronectin-binding protein linked to a second amino acid sequence; (3) nucleic acid encoding the isolated peptide of (1). Antibodies, the isolated peptides of (1) and the nucleic acids are all useful for immunisation (active or passive) and (b) inhibiting binding of bacteria to fibronectin) for preventing or treating infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAB65744-58 represent peptides
 CC which were synthesized to span the D3 motif of S. aureus fibronectin
 CC binding protein A

 PT Modifying and attaching therapeutic peptides to albumin prevents
 PT peptidase degradation, useful for increasing length of in vivo activity.
 PT
 XX
 PS Disclosure; Page 566; 733pp; English.
 XX
 SQ The present invention describes a modified therapeutic peptide (I)
 CC comprising a therapeutically active amino acid region (III) and a
 CC reactive group (II) (e.g. succinimidyl and maleimido groups) attached to
 CC a less therapeutically active amino acid region (IV), which covalently
 CC bonds with amino/hydroxyl/thiol groups on blood components to form a
 CC peptidase stabilised therapeutic peptide composed of 3-50 amino acids.
 CC (I) are useful for modifying therapeutic peptides e.g. hormones, growth
 CC factors and neurotransmitters, to protect them from peptidase activity in
 CC vivo for the treatment of various disorders. Endogenous therapeutic
 CC peptides are not suitable as drug candidates as they require frequent
 CC administration due to rapid degradation by peptidases in the body.
 CC Modifying and attaching therapeutic peptides to albumin prevents or
 CC reduces the action of peptidases to increase length of activity (half
 CC life) and specificity as bonding to large molecules decreases
 CC intracellular uptake and interference with physiological processes.
 CC AAB90829 to AAB92441 represent peptides which can be used in the

CC exemplification of the present invention

PT New bovine herpes virus-2 vectors.
XX
PS Example 2; Fig 8A-B; 130pp; English.
XX
XX The invention provides bovine herpes virus-2 (BHV-2) based vectors that
CC comprises at least one cytokine-encoding DNA sequence. The expression of
CC cytokines in mammals can up-regulate immune responses to the immunogens.
CC The cytokine is selected from interleukins (IL), colony stimulating
CC factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The
CC BHV-2 based vector or recombinant virus can be used as vaccines. They can
CC be used for preventing or treating a mucosal disease in a subject, e.g.
CC ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly
CC mastitis in cows or breast cancers in humans. They can also be used for
CC preventing or treating a stress-induced disease. The present sequence
CC represents the binding domain of a previously published S. aureus
CC fibronectin binding protein A (FnBA) sequence. The FnB binding domain
CC gene sequence FNBA8, cloned for use in this invention has 97.8 percent
CC identity when compared to the previously published FnBA and FnB8 gene
CC sequences

XX
PS Example 7; Page 157; 252pp; English.
XX
CC The invention relates to a novel method for identifying, isolating and
CC producing hyperimmune serum-reactive antigens from a pathogen, tumour,
CC allergen, a tissue or host prone to auto-immunity, where the antigens are
CC used in a vaccine, comprises providing antibody preparation from a plasma
CC pool of a type of animal, or individual sera with antibodies against the
CC specific pathogen, tumour, allergen, tissue or host prone to auto-
CC immunity. The hyperimmune serum-reactive antigens comprising any of the
CC 62 sequences of 53-2261 amino acids fully defined in the specification,
CC or their hyperimmune fragments are useful for the manufacture of a
CC pharmaceutical preparation, particularly a vaccine against staphylococcal
CC infections or colonisation against *S. aureus* or *S. epidermidis*. The
CC preparation of antibodies is useful for the manufacture of a medicament
CC for treating or preventing staphylococcal infections or colonisation
CC against *S. aureus* or *S. epidermidis*. The antibody preparations may also
CC be used for diagnostic and imaging purposes. Other conditions that can be
CC treated include cancer, autoimmune diseases or infections caused by viral
CC (e.g. HIV, hepatitis A, B or C), fungal or protozoan pathogens. This
CC sequence represents a staphylococcal protein relating to the method for
CC identifying and producing pathogen specific antigens of the invention

XX

CC The invention relates to novel genes and encoded proteins from
CC Staphylococcus aureus. A composition comprising the S. aureus protein, a
CC nucleic acid encoding the protein, or an antibody to the protein, is
CC useful as a pharmaceutical, particularly as a vaccine for treating or
CC preventing infection due to Staphylococcus bacteria, specifically an
CC infection caused by S. aureus. The composition is particularly useful for
CC treating or preventing sepsis in a patient. The composition can also be
CC used for diagnostics. The protein is also used in an assay for enzymatic
CC studies and as a target for antibiotics. This sequence represents one of
CC the novel S. aureus proteins of the invention

PT S.aureus vaccines.
XX
XX
XX Claim 23; Page 3263-3267; 3271pp; English.
XX
CC This sequence represents a Staphylococcus aureus protein sequence of the
CC invention. The DNA sequences encoding the S.aureus proteins are recorded
CC on a computer readable medium, preferably selected from a floppy or hard
CC disk, random access memory (RAM), read-only memory (ROM) or CD-ROM.
CC Homology searches using the S.aureus DNA sequences allows putative
CC functions to be assigned so that protein-encoding or regulatory regions
CC of commercial, therapeutic or industrial importance can be obtained.
CC Specifically, sequences which are likely to encode antigens have been
CC identified and these polypeptides can be used in a vaccine composition
CC against S.aureus infection. The polypeptides can also be used in a kit
CC for the immunodetection of S.aureus in a sample. S.aureus is implicated
CC in numerous human diseases, including cellulitis, eyelid infections, food
CC poisoning, osteomyelitis, skin and surgical wound infections, scalded
CC skin syndrome, toxic shock syndrome, etc. Organisms transformed with the

CC DNA sequences can be used for recombinant production of the polypeptides.
CC The new DNA sequences (and their fragments) are useful as primers or
CC probes for isolating homologues of any of the 5191 S.aureus DNA sequences
CC contained on the computer readable medium

PT Staphylococcus aureus fibronectin binding protein D2D3 polypeptide -
PT useful for combating infection at wound sites, surgical implants, etc.
PT and as antiadherent agent in oral hygiene.
XX
XX
XX Claim 5; Page 26; 38pp; English.
XX
CC The present sequence is the S. aureus fibronectin binding protein
CC polypeptide D2D3, which can be used to prevent adhesion of (e.g. gram
CC positive) bacteria, to extra-cellular matrix proteins on in-dwelling
CC devices, e.g. catheters or in wounds. D2D3 can also be used to prevent
CC oral pathogens from binding to extra-cellular matrix proteins, in the
CC oral cavity. D2D3 was found to be effective at inhibiting S. aureus 8325-
CC 4, and 120 adhesion to fibronectin coated PMMA coverslips, at a min.
CC adhesion inhibitor concn. of 10 microg/ml. D2D3 was derived from the D2
CC and D3 regions of the S. aureus J2385 (NCIMB 40532) fibronectin binding
CC protein

 PS Claim 6; Page 24; 35pp; English.
 PS
 CC AAR90937-R90942 represent D3D4 polypeptides. These sequences correspond
 CC to fragments of the Staphylococcus aureus fibronectin binding protein
 CC (Fbp). This sequence corresponds to residues 81-181 of S.aureus J2385
 CC (Fbp), and also contains a portion of the wall region 1 (WRI). These
 CC sequences, and monoclonal antibodies against them can be used to combat
 CC infection at the site of wounds, surgical implants and other in-dwelling
 CC devices (such as catheters), and as antiadherent agents in oral hygiene.
 CC They can also be used in the manufacture of a medicament for the
 CC prevention of adhesion of bacteria to extracellular matrix proteins
 CC present on in-dwelling devices or in wounds, or of oral pathogens to
 CC similar proteins on surfaces in the oral cavity

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

RA Anantharamaiah G.M., Hoeck M., Lindberg M.;
 "Nucleotide sequence of the gene for a fibronectin-binding protein
 from *Staphylococcus aureus*: use of this peptide sequence in the
 RT synthesis of biologically active peptides";
 RU Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
 CC -1- FUNCTION: The ability of bacteria to bind fibronectin has been
 CC proposed as a virulence factor enabling bacteria to colonize wound
 CC tissues and blood clots. Binding of plasma fibronectin to the
 CC bacterial surface might block adhesion receptors on *S.aureus*, thus
 CC representing an important defense mechanism against tissue
 CC invasion.
 CC -1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
 CC an amide bond (potential).

XX Antibody that binds to fibronectin-binding protein, preventing its

XX binding to fibronectin - used to treat or prevent bacterial infection,

XX especially by Staphylococci and Streptococci.

XX Example 9; Page 111, 201pp; English.

XX The invention relates to antibodies that bind to a fibronectin-binding

XX domain of a fibronectin-binding protein, and inhibit binding of the

XX protein to fibronectin. Also claimed are: (1) isolated peptides of a

XX fibronectin-binding protein that do not bind to fibronectin; (2) fusion

XX protein containing at least one peptide of a fibronectin-binding protein

XX linked to a second amino acid sequence; (3) nucleic acid encoding the

XX isolated peptide of (1). Antibodies, the isolated peptides of (1) and the

XX nucleic acids are all useful for immunisation (active or passive) and (by

XX inhibiting binding of bacteria to fibronectin) for preventing or treating

XX infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
CC mastitis in cattle, abortion in horses and many others. Since the
CC antibodies block binding of bacteria, they should be effective against
CC antibiotic-resistant strains, and may replace antibiotic therapy or
CC increase its effectiveness. Sequences AAM65744-58 represent peptides
CC which were synthesised to span the D3 motif of S. aureus fibronectin

PT New fibronectin binding peptide - combines with fusion peptide to form
PT large antigen, used in immunisation, diagnosis and for treating wounds.
XX
XX
PS Claim 1; Page 22; 33pp; English.
XX
CC The sequence comprises amino acids 17-33 of a tandem repeat, designated
CC D3 of the fibronectin binding site of Staphylococcus aureus 8325-4 FMBP.
CC The N-terminal DK may be replaced with H or K, and the C-terminal LKP may
CC be replaced by either L, IP, or OH. The peptides were synthesised using
CC standard methods and purified using reverse phase HPLC. The appropriate
CC fractions were dialysed and lyophilised. Peptide sequencing was performed
CC and the peptides digested and chemically modified by dinitroxypropylation
CC of the amino side chain of lysine. The carboxylic side chains were
CC converted to glycine methyl esters. The phenyl side chains of tyrosine
CC residues were oxidised. Chemically modified peptide D3 was compared to
CC unmodified D3. Lysine and tyrosine modifications only partially
CC diminished its activity whereas modification of aspartic/glutamic
CC residues resulted in complete loss of activity. The peptide can be used
CC for the prevention or reduction of the risk of wound infection. The
CC peptide can be used to create a large antigen for vaccinating ruminants
CC against mastitis caused by Staphylococcal infections. It can also be used
CC to diagnose Staphylococcal infections using ELISA or DNA probes. (Updated
CC on 25-MAR-2003 to correct PA field.)

PT Modifying and attaching therapeutic peptides to albumin prevents
PT peptidase degradation, useful for increasing length of in vivo activity.
XX
XX
PS Disclosure; Page 566; 733pp; English.
XX
CC The present invention describes a modified therapeutic peptide (I)
CC comprising a therapeutically active amino acid region (III) and a
CC reactive group (II) (e.g. succinimidyl and maleimido groups) attached to
CC a less therapeutically active amino acid region (IV), which covalently
CC bonds with amino/hydroxyl/thiol groups on blood components to form a
CC peptidease stabilised therapeutic peptide composed of 3-50 amino acids.
CC (I) are useful for modifying therapeutic peptides e.g. hormones, growth
CC factors and neurotransmitters, to protect them from peptidase activity in
CC vivo for the treatment of various disorders. Endogenous therapeutic
CC peptides are not suitable as drug candidates as they require frequent
CC administration due to rapid degradation by peptidases in the body.
CC Modifying and attaching therapeutic peptides to albumin prevents or
CC reduces the action of peptidases to increase length of activity (half
CC life) and specifically as bonding to large molecules decreases
CC intercellular uptake and interference with physiological processes.
CC AAB90829 to AAB92441 represent peptides which can be used in the
CC exemplification of the present invention

PT Hybrid DNA encoding Staphylococcus aureus fibronectin binding protein -
 PF useful for immunisation and topical application to prevent staphylococcal
 PT infections.

XX Claim 11; Page 12; 23pp; English.

XX The peptide has fibronectin binding ability. It is useful for immunising
 CC ruminants against staphylococcal mastitis, pref. when used at 0.5-5
 CC micrograms/kg, using 3 doses given at 1-3 week intervals; for topical
 CC application to prevent wound infection, using an isotonic saline soln. of
 CC concn. 25-250 micrograms/ml; and, when immobilised on a carrier, for
 CC diagnosing staphylococcal infections. (Updated on 25-MAR-2003 to correct
 CC PF field.) (Updated on 25-MAR-2003 to correct PA field.)

PT New bovine herpes virus-2 vectors.

XX Example 2; Fig 8A-B; 130pp; English.

XX The invention provides bovine herpes virus-2 (BHV-2) based vectors that
 CC comprise at least one cytokine-encoding DNA sequence. The expression of
 CC cytokines in mammals can up-regulate immune responses to the immunogens.
 CC The cytokine is selected from interleukins (IL), colony stimulating
 CC factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The
 CC BHV-2 based vector or recombinant virus can be used as vaccines. They can
 CC be used for preventing or treating a mucosal disease in a subject, e.g.
 CC ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly
 CC mastitis in cows or breast cancers in humans. They can also be used for
 CC preventing or treating a stress-induced disease. The present sequence
 CC represents the binding domain of a previously published S. aureus
 CC fibronectin binding protein A (FnBA) sequence. The FnB binding domain
 CC gene sequence FnBAB, cloned for use in this invention has 97.8 percent
 CC identity when compared to the previously published FnBA and FnBB gene
 CC sequences

XX PT cna gene product - useful to prevent bacterial sepsis in animal infected
XX PT with Staphylococcus aureus.
XX PS Disclosure; Page 91, 143pp; English.
XX CC This protein comprises Staphylococcus aureus fibronectin-binding
XX CC microbial surface component recognizing adhesive matrix molecule (MSCRAM)
XX CC derivative pGD, plus a vector-derived N-terminal peptide. The invention
XX CC relates to claimed nucleic acid sequences (see AA793436-38) encoding S.
XX CC aureus collagen binding protein (CBP) epitopes M17, M31 and M55 (see
XX CC AA731552-54) that confer protection against S. aureus infection. CBP
XX CC protein and antigenic epitopes are contemplated for use in the treatment
XX CC of pathological infections, especially to prevent bacterial adhesion to
XX CC collagen. The epitopes are also contemplated for use in the preparation
XX CC of vaccines and as carrier proteins in vaccine formulations, as well as
XX CC in the formulation of compositions for the prevention of S. aureus
XX CC infection. pCF33 and pGD (see AA731556) were used to raise anti-MSCRAMM
XX CC polyclonal antibodies used in passive immunisation against bovine
XX CC mastitis. (Updated on 25-MAR-2003 to correct PI field.) (Updated on 27-
XX CC AUG-2003 to correct OS field.)

XX PT New polymucleotides for the identification and development of
XX PT antibiotics, comprise sequences of antisense nucleic acids.
XX

```

PS Example 3; SEQ ID NO 12838; 511pp; English.

XX The invention relates to antisense inhibitors of genes essential to

CC prokaryotic cellular proliferation, their use in identifying the genes,

CC their use in the discovery of novel antibiotics, the essential genes

CC themselves and the encoded proteins. The prokaryotes used are *Escherichia*

CC coli, *Staphylococcus aureus*, *Salmonella typhi*, *Klebsiella pneumoniae*,

CC *Pseudomonas aeruginosa* and *Enterococcus faecalis*. The invention is also

CC useful for the identification of potential new targets for antibiotic

CC development. The antisense nucleic acids can also be used to identify

CC proteins used in proliferation, to express these proteins, and to obtain

CC antibodies capable of binding to the expressed proteins. The proteins can

CC be used to screen compounds in rational drug discovery programmes. The

CC antisense nucleic acid sequence is also useful to screen for homologous

CC nucleic acids which are required for cell proliferation in a wide variety

CC of organisms. The present sequence represents an essential prokaryotic

CC cellular proliferation protein. Note: The sequence data for this patent

CC did not form part of the printed specification, but was obtained in

CC electronic format directly from WIPO at

CC ftp.wipo.int/pub/published_pct_sequences

XX Polypeptide(s) derived from Staphylococcus aureus fibronectin binding
 PT protein - inhibit binding of bacteria to extracellular matrix proteins,
 PT for combatting infection at the site of wounds and surgical implants, and
 PT in oral hygiene.

XX Claim 6; Page 24; 35pp; English.

XX AAR90937-R90942 represent D3d4 polypeptides. These sequences correspond
 CC to fragments of the Staphylococcus aureus fibronectin binding protein
 CC (Fbp). This sequence corresponds to residues 18-130 of S.aureus 02385
 CC Fbp, and also contains the D2 region, and a portion of the D1 region.
 CC These sequences, and monoclonal antibodies against them can be used to
 CC combat infection at the site of wounds, surgical implants and other in-
 CC dwelling devices (such as catheters), and as antiadherent agents in oral
 CC hygiene. They can also be used in the manufacture of a medicament for the
 CC prevention of adhesion of bacteria to extracellular matrix proteins
 CC present on in-dwelling devices or in wounds, or of oral pathogens to
 CC similar proteins on surfaces in the oral cavity

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

SUMMARIES

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

RA  Anantharamiah G.M., Hoeck M., Lindberg M.;
RT  "Nucleotide sequence of the gene for a fibronectin-binding protein
RT  from Staphylococcus aureus: use of this peptide sequence in the
RL  synthesis of biologically active peptides";
RN  Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
CC  -1- FUNCTION: The ability of bacteria to bind fibronectin has been
CC  proposed as a virulence factor enabling bacteria to colonize wound
CC  tissues and blood clots. Binding of plasma fibronectin to the
CC  bacterial surface might block adhesion receptors on S. aureus, thus
CC  representing an important defense mechanism against tissue
CC  invasion.
CC  -1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
CC  an amide bond (potential).
CC  -----

Antibody that binds to fibronectin-binding protein, preventing its binding to fibronectin - used to treat or prevent bacterial infection, especially by Staphylococci and Streptococci.

Example 9; Page 111; 201P; English.

The invention relates to antibodies that bind to a fibronectin-binding domain of a fibronectin-binding protein, and inhibit binding of the protein to fibronectin. Also claimed are: (1) isolated peptides of a fibronectin-binding protein that do not bind to fibronectin; (2) fusion protein containing at least one peptide of a fibronectin-binding protein linked to a second amino acid sequence; (3) nucleic acid encoding the isolated peptide of (1). Antibodies, the isolated peptides of (1) and the nucleic acid are all useful for immunisation (active or passive) and (by inhibiting binding of bacteria to fibronectin) for preventing or creating infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAM6574-58 represent peptides
 CC which were synthesised to span the D3 motif of *S. aureus* fibronectin
 CC binding protein A

 PT Antibody that binds to fibronectin-binding protein, preventing its
 PT binding to fibronectin - used to treat or prevent bacterial infection,
 PT especially by Staphylococci and Streptococci.
 XX
 PS Example 8; Page 101; 201pp; English.
 XX
 CC The invention relates to antibodies that bind to a fibronectin-binding
 CC domain of a fibronectin-binding protein, and inhibit binding of the
 CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
 CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
 CC protein containing at least one peptide of a fibronectin-binding protein
 CC linked to a second amino acid sequence; (3) nucleic acid encoding the
 CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
 CC nucleic acids are all useful for immunisation (active or passive) and (by
 CC inhibiting binding of bacteria to fibronectin) for preventing or treating
 CC infection in humans or other animals, particularly by staphylococci or
 CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65670-90 represent a series of
 CC synthetic peptides based on the D3 repeat of S. aureus fibronectin
 CC binding protein A. They were synthesised to contain a proline residue at
 CC each position through the sequence (ie a proline scan)

XX New fibronectin binding peptide - combines with fusion peptide to form
 PT large antigen, used in immunisation, diagnosis and for treating wounds.

XX Claim 1; Page 22; 33pp; English.

XX The sequence comprises amino acids 17-33 of a tandem repeat, designated
 CC D3 of the fibronectin binding site of Staphylococcus aureus 8325-4 FNBp.
 CC The N-terminal DK may be replaced with H or K, and the C-terminal LKP may
 CC be replaced by either L, LP, or OH. The peptides were synthesised using
 CC standard methods and purified using reverse phase HPLC. The appropriate
 CC fractions were dialysed and lyophilised. Peptide sequencing was performed
 CC and the peptides digested and chemically modified by dihydroxypropylation

CC of the amino side chain of lysine. The carboxylic side chains were
 CC converted to glycine methyl esters. The phenyl side chains of tyrosine
 CC residues were oxidised. Chemically modified peptide D3 was compared to
 CC unmodified D3. Lysine and tyrosine modifications only partially
 CC diminished its activity whereas modification of aspartic/glutamic
 CC residues resulted in complete loss of activity. The peptide can be used
 CC for the prevention or reduction of the risk of wound infection. The
 CC peptide can be used to create a large antigen for vaccinating ruminants
 CC against mastitis caused by Staphylococcal infections. It can also be used
 CC to diagnose Staphylococcal infections using ELISA or DNA probes. (Updated
 CC on 25-MAR-2003 to correct PA field.)

PT Modifying and attaching therapeutic peptides to albumin prevents
 PT peptidase degradation, useful for increasing length of in vivo activity.

XX Disclosure; Page 566; 733pp; English.

XX The present invention describes a modified therapeutic peptide (I)
 CC comprising a therapeutically active amino acid region (II) and a
 CC reactive group (III) (e.g. succinimidy and maleimido groups) attached to
 CC a less therapeutically active amino acid region (IV), which covalently
 CC bonds with amino/hydroxyl/thiol groups on blood components to form a
 CC peptidase stabilised therapeutic peptide composed of 3-50 amino acids.
 CC (I) are useful for modifying therapeutic peptides e.g. hormones, growth
 CC factors and neurotransmitters, to protect them from peptidase activity in
 CC vivo for the treatment of various disorders. Endogenous therapeutic
 CC peptides are not suitable as drug candidates as they require frequent
 CC administration due to rapid degradation by peptidases in the body.
 CC Modifying and attaching therapeutic peptides to albumin prevents or

CC reduces the action of peptidases to increase length of activity (half
 CC life) and specificity as bonding to large molecules decreases
 CC intracellular uptake and interference with physiological processes.
 CC AAB90829 to AAB92441 represent peptides which can be used in the
 CC exemplification of the present invention

FILING DATE: 21-JAN-1997
ATTORNEY/AGENT INFORMATION:
NAME: Hibler, David W.
REGISTRATION NUMBER: 41,071
REFERENCE/DOCKET NUMBER: TAMK.189
TELECOMMUNICATION INFORMATION:
TELEPHONE: 512-418-3000
TELEFAX: 512-474-7577
INFORMATION FOR SEQ ID NO: 14:
SEQUENCE CHARACTERISTICS:
LENGTH: 21 amino acids
TYPE: amino acid
STRANDEDNESS:
TOPOLOGY: linear
US-09-010-317-14

Query Match 100.0%; Score 59; DB 4; Length 21;
Best Local Similarity 100.0%; Pred. No. 0.00029;
Matches 10; Conservative 0; Mismatches 0; Indels 0; Gaps 0;

US-09-010-317-24
Sequence 24, Application US/09010317
Patent No. 6685943
GENERAL INFORMATION:
APPLICANT: Hook, Magnus
APPLICANT: Patti, Joseph M.
APPLICANT: House-Pompeo, Karen L.
APPLICANT: Speziale, Pietro
APPLICANT: Joh, Danny
APPLICANT: McGavin, Martin J.
TITLE OF INVENTION: FIBRONECTIN BINDING PROTEIN COMPOSITIONS
NUMBER OF SEQUENCES: 105
CORRESPONDENCE ADDRESS:
ADDRESSEE: Arnold, White & Durkee
STREET: P.O. Box 4433
CITY: Houston
STATE: TX
COUNTRY: USA
ZIP: 77210-4433
COMPUTER READABLE FORM:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Database :
1: pir1.*
2: pir2.*
3: pir3.*
4: pir4.*

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

from Staphylococcus aureus: use of this peptide sequence in the
synthesis of biologically active peptides."
RL Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
CC -!- FUNCTION: The ability of bacteria to bind fibronectin has been
proposed as a virulence factor enabling bacteria to colonize wound
tissues and blood clots. Binding of plasma fibronectin to the
bacterial surface might block adhesion receptors on S.aureus, thus
representing an important defense mechanism against tissue
invasion.
CC -!- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
an amide bond (Potential).

Antibody that binds to fibronec binding protein, preventing its

binding to fibronec - used to treat or prevent bacterial infection,

especially by Staphylococci and Streptococci.

Example 9; Page 111; 201p; English.

The invention relates to antibodies that bind to a fibronec binding domain of a fibronec binding protein, and inhibit binding of a protein to a fibronec binding protein. Also claimed are: (1) isolated peptides of a fibronec binding protein that do not bind to fibronec; (2) fusion protein containing at least one peptide of a fibronec binding protein linked to a second amino acid sequence; (3) nucleic acid encoding the isolated peptide of (1). Antibodies, the isolated peptides of (1) and the nucleic acids are all useful for immunisation (active or passive) and (by inhibiting binding of bacteria to fibronec) for preventing or treating infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
CC mastitis in cattle, abortion in horses and many others. Since the
CC antibodies block binding of bacteria, they should be effective against
CC antibiotic-resistant strains, and may replace antibiotic therapy or
CC increase its effectiveness. Sequences AAM65744-58 represent peptides
CC which were synthesised to span the D3 motif of *S. aureus* fibronectin
CC binding protein A

CC The invention relates to antibodies that bind to a fibronectin-binding
CC domain of a fibronectin-binding protein, and inhibit binding of the
CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
CC protein containing at least one peptide of a fibronectin-binding protein
CC linked to a second amino acid sequence; (3) nucleic acid encoding the
CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
CC nucleic acids are all useful for immunisation (active or passive) and (by
CC inhibiting binding of bacteria to fibronectin) for preventing or treating
CC infection in humans or other animals, particularly by *Staphylococci* or
CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
CC mastitis in cattle, abortion in horses and many others. Since the
CC antibodies block binding of bacteria, they should be effective against
CC antibiotic-resistant strains, and may replace antibiotic therapy or
CC increase its effectiveness. Sequences AAM65670-90 represent a series of
CC synthetic peptides based on the D3 repeat of *S. aureus* fibronectin
CC binding protein A. They were synthesised to contain a proline residue at
CC each position through the sequence (1e a proline scan)

PT Antibody that binds to fibronectin-binding protein, preventing its
 PT binding to fibronectin - used to treat or prevent bacterial infection,
 PT especially by Staphylococci and Streptococci.

PS Example 2; Page 92; 201pp; English.

XX The invention relates to antibodies that bind to a fibronectin-binding
 CC domain of a fibronectin-binding protein, and inhibit binding of the
 CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
 CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
 CC protein containing at least one peptide of a fibronectin-binding protein
 CC linked to a second amino acid sequence; (3) nucleic acid encoding the
 CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
 CC nucleic acids are all useful for immunisation (active or passive) and (by
 CC inhibiting binding of bacteria to fibronectin) for preventing or treating
 CC infection in humans or other animals, particularly by staphylococci or
 CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAM65659-68 represent synthetic
 CC epitopes from the fibronectin binding domains DU and D1-D4 of the S.
 CC aureus fnbA gene

PT New fibronectin binding peptide - combines with fusion peptide to form
 PT large antigen, used in immunisation, diagnosis and for treating wounds.

XX Claim 1; Page 22; 33pp; English.

XX The sequence comprises amino acids 17-33 of a tandem repeat, designated
 CC D3 of the fibronectin binding site of Staphylococcus aureus 8325-4 FMBP.
 CC The N-terminal DK may be replaced with H or K, and the C-terminal LKP may
 CC be replaced by either L, LP, or OH. The peptides were synthesised using
 CC standard methods and purified using reverse phase HPLC. The appropriate
 CC fractions were dialysed and lyophilised. Peptide sequencing was performed
 CC and the peptides digested and chemically modified by dihydroxypropylation

CC of the amino side chain of lysine. The carboxylic side chains were
 CC converted to glycine methyl esters. The phenyl side chains of tyrosine
 CC residues were oxidised. Chemically modified peptide D3 was compared to
 CC unmodified D3. Lysine and tyrosine modifications only partially
 CC diminished its activity whereas modification of aspartic/glutamic
 CC residues resulted in complete loss of activity. The peptide can be used
 CC for the prevention or reduction of the risk of wound infection. The
 CC peptide can be used to create a large antigen for vaccinating ruminants
 CC against mastitis caused by Staphylococcal infections. It can also be used
 CC to diagnose Staphylococcal infections using ELISA or DNA probes. (Updated
 CC on 25-MAR-2003 to correct PA field.)

XX Modifying and attaching therapeutic peptides to albumin prevents
 PT peptidase degradation, useful for increasing length of in vivo activity.

XX Disclosure, Page 566, 733pp, English.

XX The present invention describes a modified therapeutic peptide (I)
 CC comprising a therapeutically active amino acid region (III) and a
 CC reactive group (II) (e.g. succinimidyl and maleimido groups) attached to
 CC a less therapeutically active amino acid region (IV), which covalently
 CC bonds with amino/hydroxyl/thiol groups on blood components to form a
 CC peptidase stabilised therapeutic peptide composed of 3-50 amino acids.
 CC (I) are useful for modifying therapeutic peptides e.g. hormones, growth
 CC factors and neurotransmitters, to protect them from peptidase activity in
 CC vivo for the treatment of various disorders. Endogenous therapeutic
 CC peptides are not suitable as drug candidates as they require frequent
 CC administration due to rapid degradation by peptidases in the body.
 CC Modifying and attaching therapeutic peptides to albumin prevents or

CC reduces the action of peptidases to increase length of activity (half
 CC life) and specificity as bonding to large molecules decreases
 CC intracellular uptake and interference with physiological processes.
 CC AAB90829 to AAB92441 represent peptides which can be used in the
 CC exemplification of the present invention

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RT "Nucleotide sequence of the gene for a fibronectin-binding protein
RT from Staphylococcus aureus: use of this peptide sequence in the
RT synthesis of biologically active peptides."
RL Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
CC -1- FUNCTION: The ability of bacteria to bind fibronectin has been
CC proposed as a virulence factor enabling bacteria to colonize wound
CC tissues and blood clots. Binding of plasma fibronectin to the
CC bacterial surface might block adhesion receptors on S.aureus, thus
CC representing an important defense mechanism against tissue
CC invasion.
CC -1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
CC an amide bond (Potential).

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

XX
XX Example 9, Page 111; 201P; English.
XX
XX The invention relates to antibodies that bind to a fibronectin-binding
XX domain of a fibronectin-binding protein, and inhibit binding of a
XX protein to fibronectin. Also claimed are: (1) isolated peptides of a
XX fibronectin-binding protein that do not bind to fibronectin; (2) fusion
XX protein containing at least one peptide of a fibronectin-binding protein
XX linked to a second amino acid sequence; (3) nucleic acid encoding the
XX isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
XX nucleic acids are all useful for immunisation (active or passive) and (by
XX inhibiting binding of bacteria to fibronectin) for preventing or treating
XX infection in humans or other animals, particularly by staphylococci or

```

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
CC mastitis in cattle, abortion in horses and many others. Since the
CC antibodies block binding of bacteria, they should be effective against
CC antibiotic-resistant strains and may replace antibiotic therapy or
CC increase its effectiveness. Sequences AAW65744-58 represent peptides
CC which were synthesised to span the D3 motif of S. aureus fibronectin
CC binding protein A

XX
XX
XX Antibody that binds to fibronectin-binding protein, preventing its
PT binding to fibronectin - used to treat or prevent bacterial infection,
PT especially by Staphylococci and Streptococci.
XX
XX Example 8; Page 100; 201pp; English.
XX
XX The invention relates to antibodies that bind to a fibronectin-binding
CC domain of a fibronectin-binding protein, and inhibit binding of the
CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
CC protein containing at least one peptide of a fibronectin-binding protein
CC linked to a second amino acid sequence; (3) nucleic acid encoding the
CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
CC nucleic acids are all useful for immunisation (active or passive) and (by
CC inhibiting binding of bacteria to fibronectin) for preventing or treating
CC infection in humans or other animals, particularly by staphylococci or
CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
CC mastitis in cattle, abortion in horses and many others. Since the
CC antibodies block binding of bacteria, they should be effective against
CC antibiotic-resistant strains, and may replace antibiotic therapy or
CC increase its effectiveness. Sequences AAW65670-90 represent a series of
CC synthetic peptides based on the D3 repeat of S. aureus fibronectin
CC binding protein A. They were synthesised to contain a proline residue at
CC each position through the sequence (ie a proline scan)

PT New fibronectin binding peptide - combines with fusion peptide to form
PT large antigen, used in immunisation, diagnosis and for treating wounds.

PS Claim 1; Page 22; 33pp; English.

CC The sequence comprises amino acids 17-33 of a tandem repeat, designated
CC D3 of the fibronectin binding site of *Staphylococcus aureus* 8325-4 FNBp.
CC The N-terminal DK may be replaced with H or K, and the C-terminal LKP may
CC be replaced by either L, IP, or OH. The peptides were synthesised using
CC standard methods and purified using reverse phase HPLC. The appropriate
CC fractions were dialysed and lyophilised. Peptide sequencing was performed
CC and the peptides digested and chemically modified by dihydroxypropylation
CC of the amino side chain of lysine. The carboxylic side chains were
CC converted to glycine methyl esters. The phenyl side chains of tyrosine
CC residues were oxidised. Chemically modified peptide D3 was compared to
CC unmodified D3. Lysine and tyrosine modifications only partially
CC diminished its activity whereas modification of aspartic/glutamic
CC residues resulted in complete loss of activity. The peptide can be used
CC for the prevention or reduction of the risk of wound infection. The

CC peptide can be used to create a large antigen for vaccinating ruminants
CC against mastitis caused by *Staphylococcal* infections. It can also be used
CC to diagnose *Staphylococcal* infections using ELISA or DNA probes. (Updated
CC on 25-MAR-2003 to correct PA field.)

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

RL
CC -!- FUNCTION: The ability of bacteria to bind fibronectin has been
CC proposed as a virulence factor enabling bacteria to colonize wound
CC tissues and blood clots. Binding of plasma fibronectin to the
CC bacterial surface might block adhesion receptors on S.aureus, thus
CC representing an important defense mechanism against tissue
CC invasion.
CC -!- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
CC an amide bond (Potential).

CC -1- FUNCTION: Catalyzes xyloglucan endohydrolysis (XEH) and/or
CC endotransglucosylation (XET). Cleaves and religates xyloglucan
CC polymers, an essential constituent of the primary cell wall, and
CC thereby participates in cell wall construction of growing tissues
CC (By similarity).
CC -1- CATALYTIC ACTIVITY: Breaks a beta-(1-24) bond in the backbone of a
CC xyloglucan and transfers the xyloglucanyl segment on to O-4 of the
CC non-reducing terminal glucose residue of an acceptor, which can be
CC a xyloglucan or an oligosaccharide of xyloglucan.
CC -1- SUBCELLULAR LOCATION: Apoplast (Probable).
CC -1- TISSUE SPECIFICITY: Predominantly expressed in flower buds.
CC -1- INDUCTION: By auxin and brassinolide.
CC -1- PTM: Contains at least one intrachain disulfide bond essential for
CC its enzymatic activity (By similarity).
CC -1- SIMILARITY: Belongs to the glycosyl hydrolase 16 family. XTH group
CC 1 subfamily.
CC -1- DATABASE: NAME=XTH-world;
CC WWW="http://www.plantbio.cornell.edu/XTH".

Antibody that binds to fibronec binding protein, preventing its

binding to fibronec - used to treat or prevent bacterial infection,

especially by Staphylococci and Streptococci.

Example 9; Page 111; 201P; English.

The invention relates to antibodies that bind to a fibronec binding domain of a fibronec binding protein, and inhibit binding of the protein to fibronec. Also claimed are: (1) isolated peptides of a fibronec binding protein that do not bind to fibronec; (2) fusion protein containing at least one peptide of a fibronec binding protein linked to a second amino acid sequence; (3) nucleic acid encoding the isolated peptide of (1). Antibodies, the isolated peptides of (1) and the nucleic acids are all useful for immunisation (active or passive) and (by inhibiting binding of bacteria to fibronec) for preventing or treating infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65744-58 represent peptides
 CC which were synthesised to span the D3 motif of *S. aureus* fibronectin
 CC binding protein A

XX
XX Antibody that binds to fibronectin-binding protein, preventing its
XX binding to fibronectin - used to treat or prevent bacterial infection,
XX especially by Staphylococci and Streptococci.
XX
XX Example 8; Page 101; 201pp; English.
XX

XX The invention relates to antibodies that bind to a fibronectin-binding
XX domain of a fibronectin-binding protein, and inhibit binding of the
XX protein to fibronectin. Also claimed are: (1) isolated peptides of a
XX fibronectin-binding protein that do not bind to fibronectin; (2) fusion
XX protein containing at least one peptide of a fibronectin-binding protein
XX linked to a second amino acid sequence; (3) nucleic acid encoding the
XX isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
XX nucleic acids are all useful for immunisation (active or passive) and (by
XX inhibiting binding of bacteria to fibronectin) for preventing or treating
XX infection in humans or other animals, particularly by staphylococci or
XX streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
XX mastitis in cattle, abortion in horses and many others. Since the
XX antibodies block binding of bacteria, they should be effective against
XX antibiotic-resistant strains, and may replace antibiotic therapy or
XX increase its effectiveness. Sequences AAW65670-90 represent a series of
XX synthetic peptides based on the D3 repeat of S. aureus fibronectin
XX binding protein A. They were synthesised to contain a proline residue at
XX each position throughout the sequence (ie a proline scan)

XX New fibronection binding peptide - combines with fusion peptide to form
XX large antigen, used in immunisation, diagnosis and for treating wounds.

XX Claim 1; Page 22; 33pp; English.

XX The sequence comprises amino acids 17-33 of a tandem repeat, designated
CC D3 of the fibronection binding site of Staphylococcus aureus 8325-4 FmBP.
CC The N-terminal DK may be replaced with H or K, and the C-terminal LKP may
CC be replaced by either L, LP, or OH. The peptides were synthesised using
CC standard methods and purified using reverse phase HPLC. The appropriate
CC fractions were dialysed and lyophilised. Peptide sequencing was performed
CC and the peptides digested and chemically modified by dinitropropylation
CC of the amino side chain of lysine. The carboxylic side chains were
CC converted to glycine methyl esters. The phenyl side chains of tyrosine
CC residues were oxidised. Chemically modified peptide D3 was compared to
CC unmodified D3. Lysine and tyrosine modifications only partially
CC diminished its activity whereas modification of aspartic/glutamic
CC residues resulted in complete loss of activity. The peptide can be used
CC for the prevention or reduction of the risk of wound infection. The
CC peptide can be used to create a large antigen for vaccinating ruminants

CC against mastitis caused by Staphylococcal infections. It can also be used
CC to diagnose Staphylococcal infections using ELISA or DNA probes. (Updated
CC on 25-MAR-2003 to correct PA field.)

TYPE: amino acid

STRANDEDNESS: single

TOPOLOGY: linear

MOLECULE TYPE: peptide

FEATURE:

NAME/KEY: Peptide

LOCATION: 1

OTHER INFORMATION: /note= "Amino acid 1 is R' wherein

OTHER INFORMATION: R' is hydroxy, K or DK."

FEATURE:

NAME/KEY: Peptide

LOCATION: 19

OTHER INFORMATION: /note= "Amino acid 19 is R2 wherein

OTHER INFORMATION: R2 is hydroxy, L, LP or LPK."

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

SUMMARIES

PC4276
dentin phosphophoryn precursor - rat (fragment)
C/Species: Rattus norvegicus (Norway rat)
C/Date: 28-May-1997 #sequence_revision 17-Sep-1997 #text_change 09-Jul-2004
C/Accession: PC4276
R/Ritche, H.; Wang, L.H.
Biochem. Biophys. Res. Commun. 231, 425-428, 1997
A/Title: A mammalian bicistronic transcript encoding two dentin-specific proteins.
A/Reference number: PC4275; MUID:97223472; PMID:9070293
A/Accession: PC4276
A/Molecule type: mRNA
A/Residues: 1-31 <RT>
A/Cross-references: UNIPROT:Q8VBY1
A/Note: the authors translated the codon AGG for residue 5 as Ser
C/Comment: This protein plays a central role in the mineralization process leading to mat

RT "Nucleotide sequence of the gene for a fibronectin-binding protein
RT from Staphylococcus aureus: use of this peptide sequence in the
RT synthesis of biologically active peptides.";
RU Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
CC -1- FUNCTION: The ability of bacteria to bind fibronectin has been
CC proposed as a virulence factor enabling bacteria to colonize wound
CC tissues and blood clots. Binding of plasma fibronectin to the
CC bacterial surface might block adhesion receptors on S.aureus, thus
CC representing an important defense mechanism against tissue
CC invasion.
CC -1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
CC an amide bond (Potential).
